### 1.5.2 Nassau office

*Registration of Ships, Seafarer Certification, Port State Control in The Bahamas, Technical Advice for Local Ships, Long Range Identification & Tracking (LRIT), Yacht Registration*

The Bahamas Maritime Authority  
Shirlaw House  
87 Shirley Street  
PO Box N4679,  
Nassau, N.P.  
Bahamas

Main Phone Number: +1 242 356 5772  
Fax Number: +1 242 356 5889  
E-Mail Address [nassau@bahamasmaritime.com](mailto:nassau@bahamasmaritime.com) (General enquiries)  
[lrit@bahamasmaritime.com](mailto:lrit@bahamasmaritime.com) (LRIT)  
[yachts@bahamasmaritime.com](mailto:yachts@bahamasmaritime.com) (Yacht registration)

### 1.5.3 New York office

*Registration of Ships and Associated Services*

The Bahamas Maritime Authority  
Bahamas House  
231 East 46th Street  
New York 10017  
United States of America

Main Phone Number +1 212 829 0221  
Fax Number +1 212 829 0356  
E-Mail Address [newyork@bahamasmaritime.com](mailto:newyork@bahamasmaritime.com)

### 1.5.4 Hong Kong office

*Registration of Ships, Seafarer Certification and Technical Advice*

The Bahamas Maritime Authority  
Room 2019 – 2020  
20<sup>th</sup> Floor  
Hutchison House  
10 Harcourt Road, Central  
Hong Kong

Main Phone Number +852 2522 0095  
Fax Number +852 2522 0094  
E-Mail Address [hongkong@bahamasmaritime.com](mailto:hongkong@bahamasmaritime.com)

### 1.5.5 Piraeus office

#### *Registration of Ships, Seafarer Certification and Technical Advice*

BMA Maritime Services (Hellas) SPLLC  
10 Antoniou Ambatielou Street  
185 36 Piraeus  
Greece

Main Phone Number +30 210 429 3802/3/4

E-Mail Address [greece@bahamasmaritime.com](mailto:greece@bahamasmaritime.com)

## **1.6 BMA Agents**

### 1.6.1 Japan

#### *Registration of Ships*

Mr Hiroyuki Miike (Registrar)  
Mitsui Soko Co., Ltd.,  
Kanto Branch Ships & Registry Team, 20-1,  
Nishi-shimbashi 3-chrome, Minato-ku,  
Tokyo 105-0003 Japan

Tel: +(81) 3 6400 8306

Fax: +(81) 3 6880 9936

E-mail: [miike@mitsui-soko.co.jp](mailto:miike@mitsui-soko.co.jp)

### 1.6.2 Germany

#### *Registration Enquiries*

Mr Ulrich Hans Reinecke  
(Representative of Bahamas Maritime Authority)

Tel: +49 491 912 1787

Fax: +49 491 912 1790

Mobile: +49 174 323 6696

E-mail: [ulli.reinecke@t-online.de](mailto:ulli.reinecke@t-online.de)

## **2 Ratified Conventions**

Conventions which have been ratified by The Bahamas which require survey, certification and verification by Bahamas Recognised Organisations are applied "as amended", unless otherwise stated.

For a full list of ratified Conventions, please refer to BMA information Bulletin No. 101.

## **3 Survey, Certification & Applicable Instruments**

### **3.1 Recognised Organisations**

The Bahamas Maritime Authority has authorised a number of bodies (Recognised Organisations) to carry out statutory survey and certification services on behalf of the government of The Commonwealth of The Bahamas on ships, offshore units and yachts registered in The Bahamas.

Please refer to BMA Information Bulletin No.3 for details of current Recognised Organisations.

### **3.2 Extent of Authorisation**

Bahamas Recognised Organisations are authorised to undertake surveys, audits and inspections and issue relevant statutory certification on behalf of the BMA as detailed in "Applicable Instruments" (see paragraph 3.3 below) with the following exceptions:

- (i) Croatian Register of Shipping – not authorised for MODUs and gas carriers

It should be noted that not all Recognised Organisations class all ship types or offer all services.

### 3.3 Applicable Instruments

		<b>AUTHORISATION*</b> (see below for key)			
		IS	RS	A/I	EX
<b>1.</b>	<b>SOLAS Convention 1974 and Protocols of 1978 &amp; 1988, as amended</b>

**\* Key to Authorisation:**

F: Full authorisation to perform plan approval, type approval, carry out surveys and issue and/or revoke necessary interim and full term certificates. Full authorisation includes the execution of stability verification where applicable.

A: Issuance of certificate to be previously approved by the BMA.

M: Exemptions and Equivalence under MLC 2006 are NOT delegated to Recognised Organisations. DMLC Part I and all MLC exemptions and equivalences are issued by the BMA.

X: Full authorisation for surveys required by Regulation 1(1)(b) of the AFS Convention

Recognised Organisations are authorised to apply the requirements of the relevant Codes and Conventions as amended or modified. Such authorisation includes approval of plans and documents that may be referred to within the Convention and Code requirements, as amended.

IS: Initial survey

RS: Renewal survey

A/I: Annual or intermediate survey

EX: Exemption from a requirement of the convention

## **3.4 Specific Instructions to Recognised Organisations**

### *3.4.1 Use of Exclusive Surveyors, Auditors and Inspectors*

The Recognised Organisation shall use exclusive surveyors, auditors and inspectors only to undertake statutory survey and certification services. Exclusive surveyors, auditors and inspectors are persons solely employed by the Organisation, duly qualified, trained and authorised to execute all duties and activities incumbent upon their employer, within their level of work responsibility and in accordance with IACS procedural requirements.

Bahamas Recognised Organisations are permitted to use exclusive surveyors of other IACS member societies with which they have a bilateral agreement, provided that the other society is also a Bahamas Recognised Organisation.

While still remaining responsible for the certification on behalf of the flag State, the Recognised Organisation may subcontract radio surveys and other suppliers to non-exclusive surveyors in accordance with the relevant provisions of IMO Resolution A.789(19).

### *3.4.2 Dual Class*

The BMA has no objection to dual Class arrangements, provided that the Classification Society issuing the relevant statutory certificates on behalf of The Commonwealth of The Bahamas is a Bahamas Recognised Organisation.

### *3.4.3 Authority to require repairs*

As per the provisions of SOLAS Chapter I, Regulation 6(b); MARPOL Annex I, Regulation 6.3.2; MARPOL Annex II, Regulation 8.2.3; MARPOL Annex IV, Regulation 4.4; MARPOL Annex VI, Regulation 5; and MLC Regulation 5.1.4.7(c), Recognised Organisation surveyors are authorised to require repairs to a ship and/or rectification of deficiencies identified during surveys. In addition, surveyors are authorised to carry out surveys under the MARPOL and SOLAS Conventions, if requested to do so by the appropriate authorities of a port State (see also 3.4.6(1) below).

### *3.4.4 Use of Service Suppliers*

Recognised Organisations may utilise their approved suppliers of support services to assist in statutory surveys and certification, in accordance with IACS Unified Requirement Z17. The services and functions performed by these service suppliers must be covered by a certificated quality management system acceptable to the Recognised Organisation.

### *3.4.5 Survey of Ships Joining the Register*

IACS Procedural Requirement 28 (procedure for change of flag) is to be followed.

### *3.4.6 Reporting to the Administration*

The notification requirements are as follows:

- (i) *Ship not fit to proceed to sea*

As per the provisions of SOLAS Chapter I, Regulation 6(c), MARPOL Annex I, Regulation 6.3.3; MARPOL Annex II, Regulation 8.2.5; MARPOL Annex IV, Regulation 4.5; MARPOL Annex VI, Regulation 5.3.3; and MLC Regulation 5.1.4.7(c), in cases where the condition of a ship or its equipment does not correspond substantially with the particulars of the relevant statutory certificate, or is such that the ship is not fit to proceed to sea without danger to the ship or persons on board, or presents an unreasonable threat of harm to the marine environment, or a threat to the security of destination ports or coastal states, or a significant danger to seafarers' safety, health or security, the Recognised Organisation or attending surveyor shall immediately ensure that corrective action is taken and shall in due course notify the BMA.

If such corrective action is not taken the relevant certificate should be withdrawn and the BMA notified immediately and, if the ship is in the port of another Party, the appropriate authorities of the port State shall also be notified immediately.

For the purposes of these requirements, such cases include:

- Where serious deficiencies are identified during any survey or visit to a ship. The guidance on detainable deficiencies given in Section 3 of Appendix 2 of IMO Assembly Resolution A.1052(27) and IACS Recommendation 98 should be used as an illustrative list of deficiencies which are considered as serious;
- Failure to complete any class or statutory survey, audit or inspection within due date;
- Where any proposed condition of class, statutory memorandum or equivalent remark, issued in conjunction with serious deficiencies, prevents the completion of survey.

*(ii) Suspension and withdrawal of Class*

The BMA is to be notified of any suspension and/or withdrawal of class. In any case where Class is withdrawn from a ship in service and where a surveyor attends the ship, Recognised Organisations are authorised to remove from the ship all statutory certification that has been issued by, or on behalf of, The Commonwealth of The Bahamas, concurrent with the removal of Class certificates.

*(iii) Changes affecting details of Registry or Classification*

The BMA is to be notified of any changes which affect the Certificate of Registry or Class Certificate, including:

- Building details, e.g. ship being rebuilt, re-measured or undergoing major conversion;
- Ship or vessel type;
- Propulsion and engine details (e.g. total power, means of propulsion, type of engines);
- Ship dimensions (length, breadth, depth);
- No. of persons being accommodated;
- Tonnage (Gross, Net);
- Equipment fitted or removed to effect a major modification.

Changes in Class notation are also to be reported to the BMA.

*(iv) Forms / Records / Reports / Certificates*

Copies of short or full-term international Convention certificates and associated reports issued on behalf of the Commonwealth of the Bahamas are not to be forwarded to BMA offices unless specifically requested, with the exception of the following documents:

- Any statutory certificate issued which has an associated exemption, extension or equivalent arrangement, together with details of the affected item(s);
- ISPS Code certification (interim and full term ISSC);
- ISM Code certification (interim and full term SMC);
- MLC 2006 certification (Maritime Labour Certificate)

Copies of the above should be forwarded by e-mail (**not in hard copy**), except where online access to these documents is available to the BMA.

Hard copies of the following documents **only** are to be sent to the BMA:

- Certificate of Survey for new buildings

*3.4.7 Ships not compliant with statutory requirements*

In cases where the condition of a ship or its equipment does not correspond substantially with the particulars of the relevant statutory certificate, the surveyor or Recognised Organisation should follow 3.4.6(i) above.

For minor items, the Recognised Organisation shall follow the requirements specified in IACS Recommendation No. 98 (Rev.1 Mar 2012).

In instances where, temporarily, the requirements of an applicable instrument cannot be met under particular circumstances, the surveyor shall specify such measures or supplementary equipment as may be available to permit the vessel to proceed to a suitable port where permanent repairs or rectifications can be carried out or replacement equipment fitted. For urgent cases out of London office hours, the attending surveyor should contact the BMA Emergency Response Officer for authorisation to issue a restricted certificate.

Any exemption or equivalent arrangement that has been agreed for a specific ship will apply only to that ship for the period of time agreed. Exemptions and equivalents agreed under the process above do not apply to other ships, unless specifically authorised by the BMA, and are not to be repeated or extended for the same ship without prior BMA agreement.

Certification issued in conjunction with an exemption, extension or equivalent arrangement will be as agreed with the BMA, taking account of the relevant Convention or Code requirements and in accordance with the procedural systems operated by individual Recognised Organisations.

In all cases, applications shall be submitted in accordance with the guidelines outlined in BMA Information Bulletin No. 8.

### *3.4.8 Interpretation of Statutory Requirements*

The BMA has issued guidance on the application of mandatory and non-mandatory technical standards.

In the absence of BMA issued direction, guidance contained in IMO Resolutions and Circulars should be considered. In the absence of either flag State or IMO guidance, relevant technical standards of the Recognised Organisation, including IACS Unified Requirements, Unified Interpretations, Procedural Requirements, etc. should be considered.

Further information is available in BMA Information Bulletin No.101.

The BMA does not give tacit acceptance to proposed arrangements or guidelines by its Recognised Organisations. Explicit acceptance must be sought by the Recognised Organisation.

### *3.4.9 Approval and Endorsement of Statutory Documents*

For all statutory documents which are required to be carried on board ships that must be "approved by the Administration", a Recognised Organisation may adopt either of two methods for endorsement as set out in BMA Information Bulletin No. 91.

### *3.4.10 Certification for Conventions not in Force or not Ratified by The Bahamas*

Where a ship is surveyed and found to be in compliance with a Convention that is either not in force or has not been ratified by The Bahamas, a Statement of Compliance<sup>1</sup> may be issued on behalf of the Commonwealth of The Bahamas. This certification is subject to the same annual / intermediate endorsement as a Convention certificate.

When the subject Convention is both in force *and* ratified by The Bahamas, the Statement of Compliance may be replaced directly with a Convention Certificate, without survey, with the expiry date being no later than that on the existing Statement of Compliance.

---

<sup>1</sup> The BMA prefers the use of the term "Statement of Compliance", however if required by the Recognised Organisation's own processes, the "Statement of Compliance" may be entitled a "Certificate of Compliance" or "Document of Compliance".

## **SPECIFIC CONVENTIONS AND CODES**

## 4 International Convention for the Safety of Life at Sea (SOLAS)

### 4.1 Chapter I: General Provisions

#### 4.1.1 Annual & intermediate surveys

As per the provisions of SOLAS Regulation I/14(i), if the surveys required under Regulation I/7(a), 8(a), 9(a) & 10(a) are not carried out before the end of the range date, or commenced within the range date, but not completed before the end of the range date, the affected certificates cease to be valid.

In cases of *force majeure*, the BMA may, at its discretion, authorise the administrative postponement of the surveys until the first available opportunity. When applying for such a postponement, the Recognised Organisation shall provide **full details** of the situation, including relevant documentary evidence of attempts to have the surveys completed within the range dates and other supporting information.

In all cases of postponement, the existing certificates shall not be endorsed when the surveys are undertaken. The existing certificates are to be withdrawn and the appropriate surveys undertaken to the extent required by the BMA; generally this will be to the extent of the survey that was not carried out (annual or intermediate). New certificates are to be issued on successful completion of the surveys, with the same expiry date as the original certificates. The previous annual/intermediate survey sections of the new certificate are to be struck through and annotated "N/A".

#### 4.1.2 Certification of Passenger Ships

Passenger ships are to be certificated, maintained and operated in accordance with Class rules and statutory requirements at all times. Where a passenger ship is unable to satisfy the requirements necessary for completion of the Passenger Ship Safety Certificate survey, the necessary exemptions or extensions shall be applied for in accordance with the procedures outlined in BMA Information Bulletin No. 8.

In the case of an initial delivery voyage where a number of passenger ship requirements remain outstanding, the BMA may give consideration to issuing cargo ship certificates to the vessel. The BMA may also give consideration to issuing cargo ship certificates to a passenger vessel that is not in service, for transit voyages to repair yards etc. Any such application shall be submitted to the Recognised Organisation, who shall verify the following, prior to submission to the BMA:

- The Company<sup>2</sup> has a valid ISM Document of Compliance for the operation of cargo ships, and
- The vessel has a valid Safety Management Certificate as a cargo ship and an operational safety management system addressing the affected voyage, and
- The vessel has a valid International Ship Security Certificate, and
- The complement of persons on board, excluding the marine crew (e.g. deck/engine officers and ratings) and persons normally employed on board (i.e.

---

<sup>2</sup> The "Company" is the entity responsible for the management of the ship in accordance with the ISM Code. For ships which the ISM Code is not applicable, the Company is the Managing Owner in accordance with Section 52 of the Bahamas Merchant Shipping Act

hotel/entertainment staff, etc., who have received STCW basic familiarisation training).

#### 4.1.3 *Dry Docking of Passenger Ships*

The BMA's basic requirement for passenger ships is for bottom inspection in dry dock twice in any five year period, as determined by the Load Line certificate. It is, however, possible for passenger ships of less than 15 years of age to undertake bottom inspection in dry dock once in any five year period.

The BMA has issued guidelines in BMA Information Bulletin No.73.

#### 4.1.4 *Extended Dry Docking Schemes for Cargo Ships*

The BMA accepts that some of its Recognised Organisations offer extended dry docking schemes (i.e. 7.5 years between bottom inspections in dry dock) for certain types of cargo ship. The BMA has no objection to such schemes, subject to the following conditions:

- Ship must not be subject to Enhanced Survey Programme (ESP);
- Class requirements for the scheme are to be met in full, including tailshaft monitoring and provisions for in water survey;
- Regular lubricating oil analysis is to be undertaken for auxiliary thrusters, if fitted, and presented for review at every bottom survey;
- A minimum of two (2) bottom inspections are to be carried out during the five year renewal period of the Safety Construction Certificate;
- The period between bottom inspections is not to exceed 36 months;
- The scope of renewal survey, if carried out afloat, is to be to the same extent as an ordinary renewal survey in dry dock;
- Access for examination, testing and maintenance must be available for all items required for renewal survey;
- Protective coatings in double bottom/double side ballast tanks below the deepest load waterline are to be maintained in GOOD condition.

All applications for ships to be accepted on to an extended dry docking scheme are to be forwarded by the Recognised Organisation to the BMA for approval, as per BMA Information Bulletin No.8. Each application is to be provided with the following information:

- Confirmation that arrangements required for in water survey are provided, including means, such as hinged gratings, being provided on all sea chests to allow divers access for examination of the external sides of through hull connections and sea valves;
- Confirmation that relevant ship's drawings are available to the attending surveyor(s);
- Method of inspection of ship side valves;
- Method of inspection of box coolers (where fitted);
- Confirmation that, where fitted, thruster lubricating oil analysis has been provided to Class and no abnormal readings have been observed;
- Confirmation that protective coating of ballast tanks is in GOOD condition;
- Confirmation that external hull coating system is designed to remain effective for the full 7.5 year period;
- Confirmation that a hull impressed current cathodic protection system is fitted and operational, or that renewal of external hull sacrificial anodes in afloat

condition is possible.

Where a ship is approved for an extended dry docking scheme, it is on the basis that the ship may still be required to proceed to dry dock if any damage is found at in water surveys or if the conditions are not complied with. The scheme will be terminated on change of owner, ISM manager, Classification Society or flag.

## **4.2 Chapter II-1: Construction: Structure, Subdivision and Stability, Machinery and Electrical Installations**

### *4.2.1 Watertight (W/T) Door Closure on Passenger Vessels*

SOLAS Chapter II-1 requirements for watertight doors shall be strictly complied with on passenger vessels, however applications to leave specific watertight doors open during navigation will be considered by the BMA. The Company shall submit the application with full supporting information to the Recognised Organisation. The Recognised Organisation will forward the application to BMA after appropriate review and recommendation.

Please refer to BMA Information Bulletin No. 96.

### *4.2.2 Opening of Cargo and Passenger Ship Side Shell Doors when at Anchor*

With regard to SOLAS Chapter II-1 requirements for side shell doors, Recognised Organisations may review applications for certain doors to be opened for operational purposes or for the embarkation/disembarkation of passengers, when the ship is at a safe anchorage. Applications to issue a Letter of authorisation on behalf of The Commonwealth of The Bahamas in order to satisfy particular port authority requirements should be made by the Recognised Organisation in accordance with the guidelines in BMA Information Bulletin No. 8.

### *4.2.3 Watertight Sliding Door Local Operating Handles*

Watertight door operating handles shall comply fully to the requirements set out in SOLAS in order to ensure uniformity of application. It is possible that confusion to the seafarer may be caused by the utilisation of different forms of opening mechanism on different ships. In order to reduce the risk of personal injury or inappropriate operation in case of emergency, the BMA considers that safe operation of watertight doors can only be achieved by using conventional handles as described in SOLAS Chapter II-1/13.

### *4.2.4 Display of Manoeuvring Information (IMO Assembly Resolution A.601(15))*

With reference to SOLAS Chapter II-1 requirements on display of manoeuvring information, IMO Assembly Resolution A.601(15) *Recommendations for provision and display of manoeuvring information on board ships* shall be applied to all ships.

### *4.2.5 Requirements for valves fitted to pipes piercing a collision bulkhead*

SOLAS II-1/12.5.1 requires that any pipe piercing a collision bulkhead is fitted with a screw-down valve capable of being operated from above the bulkhead deck. The BMA concurs with the views of IACS, as outlined in paper SLF/51/3/4 to the IMO Subcommittee on Stability, Loadlines and Fishing vessel safety, that the use of butterfly valves provide a means as effective as a screw-down valve. The fitting of butterfly valves in lieu of screw-down valves on pipes piercing a collision bulkhead is therefore acceptable on Bahamian registered ships.

#### 4.2.6 *Ship structure access manual*

Ship Structure Access Manuals approved by any Recognised Organisation on behalf of other Administrations, or approved directly by other Administrations, are not acceptable. Accordingly, the Ship Structure Access Manual is to be approved on behalf of The Commonwealth of The Bahamas by a Bahamas Recognised Organisation when the vessel joins the Registry.

#### 4.2.7 *Initial testing of watertight bulkheads*

To satisfy the requirements of SOLAS II-1 Regulation 11 the BMA accepts the use of IACS UR S14 Rev.4 for the initial testing of watertight bulkheads. Where the ship builder or owner wishes to have the extent of tank testing reduced below the requirements of UR S14 or waived completely, the ship builder shall make an application, via the Recognised Organisation, to the BMA for consideration, in accordance with the procedures in BMA Information Bulletin No.8. Such requests shall include a technical justification for the reduction in extent or waiving of UR S14 requirements.

There is no scope in UR S14 for hydrostatic testing to be waived completely on subsequent sister ships of a series. Where the ship builder or owner wishes to reduce the extent of hydrostatic testing below the requirements of UR S14 an application to the BMA for consideration is to be made as per the paragraph above.

The foregoing is applicable to all ships, except where more stringent requirements for the testing of cargo tanks of liquefied gas carriers and chemical tankers exist.

#### 4.2.8 *Noise levels on board ships*

As per the provisions of SOLAS II-1/3-12, ships of 1,600 gross tonnage and above:

- (i) for which the build contract is placed on or after 01 July 2014; or
- (ii) in the absence of a building contract, the keels of which are laid or which are at a similar stage of construction on or after 1 January 2015; or
- (iii) the delivery of which is on or after 1 July 2018,

shall comply with the provisions of MSC.337(91) *Code on Noise Levels On Board Ships*, to the fullest extent practicable.

Ships delivered before 01 July 2018 and:

- (i) contracted for construction before 1 July 2014 and the keels of which are laid or which are at a similar stage of construction on or after 1 January 2009 but before 1 January 2015; or

- (ii) in the absence of a building contract, the keels of which are laid or which are at a similar stage of construction on or after 1 January 2009 but before 1 January 2015,

should comply with the provisions of A.468(XII) or MSC.337(91) *Code on Noise Levels On Board Ships*, to the fullest extent practicable.

For ships other than those listed above (i.e. the keels of which are laid or which are at a similar stage of construction before 1 January 2009), it is strongly recommended that a noise survey should be undertaken on each ship, in accordance with the provisions of A.468(XII) or MSC.337(91) *Code on Noise Levels On Board Ships*, and a noise survey report held on board.

Shipowners shall also ensure that an assessment of risks, including exposure to noise, is carried out, in line with their obligations under the Maritime Labour Convention 2006.

#### *4.2.9 Performance Standard for Protective Coatings (PSPC) for Dedicated Sea Water Ballast Tanks*

MSC.215(82) *Performance Standard for Protective Coatings for Dedicated Seawater Ballast Tanks in all Ship Types and Double-Side Skin Spaces of Bulk Carriers* does not apply to the tanks listed in IACS UI SC 227 Rev.1, May 2011.

### **4.3 Chapter II-2: Construction: Fire Protection, Fire Detection and Fire Extinction**

#### *4.3.1 CO<sub>2</sub>, Halon and Alternative Gas Fixed Fire Fighting Systems*

The BMA has issued guidance on the servicing of CO<sub>2</sub> cylinders for fixed fire extinguishing installations, low pressure bulk CO<sub>2</sub> systems, Halon fire extinguishing systems, alternative fixed gas fighting media and portable fire extinguishers.

Please refer to BMA Information Bulletin No. 97.

#### *4.3.2 Control Valves of Fixed CO<sub>2</sub> and Other Fixed Gas Fire Fighting Systems*

Control valves of fixed CO<sub>2</sub> and other fixed gas fire-extinguishing systems are to be internally inspected at least once in any 5-year period.

#### *4.3.3 Emergency Escape Breathing Devices (EEBDs)*

Please refer to BMA Information Bulletin No.29

#### *4.3.4 Fire Fighter's Outfits*

##### *(i) Compressed air breathing apparatus*

Fire fighter's outfits for ships constructed on or after 01 July 2014 shall be fitted with "an audible alarm and a visual or other device which will alert the user before the volume of the air in the cylinder had been reduced to no less than 200 litres", in accordance with Chapter 3, Para. 2.1.2.2 of the International Code for Fire Safety Systems (FSS Code).

Ships constructed before 01 July 2014 shall comply with this requirement by not later than 01 July 2019.

*(ii) Two-way radiotelephone apparatus*

Fire fighter's outfits for ships constructed on or after 01 July 2014 shall carry a minimum of 2 two-way radiotelephone apparatus for each fire party for fire fighter's communication, in accordance with SOLAS II-2, Regulation 10.10.4. The radiotelephone apparatus shall be explosion proof or intrinsically safe.

Ships constructed before 01 July 2014 shall comply with this requirement by not later than the first safety equipment survey after 01 July 2018.

*4.3.5 Means of recharging breathing apparatus cylinders*

SOLAS Regulation II-2/15.2.2.6, which entered into force on 01 July 2014, requires that "An on board means of recharging breathing apparatus cylinders used during drills shall be provided or a suitable number of spare cylinders shall be carried on board to replace those used".

The BMA strongly recommends that all ships carry an on board means of recharging breathing apparatus cylinders. Where an on board means of charging is not provided, the Company shall establish how many spare cylinders are required for training purposes, in addition to those required by SOLAS, taking into account the number of drills carried out, availability of recharging facilities, ship's schedule, etc. A minimum of one cylinder should be provided for each fire suit, according to the Muster List, but not less than two cylinders in total.

*4.3.6 Breathing air quality*

Where air compressors are carried on board as a means of recharging breathing apparatus cylinders, the air quality is to be checked periodically as per paragraph 7.8 of MSC.1/Circ.1432, taking into account any additional manufacturer's instructions.

Air quality should comply with *BS EN 12021:1999 Respiratory protective devices. Compressed air for breathing apparatus*, or an equivalent national standard acceptable to the BMA.

*4.3.7 Fire Hoses*

Fire hoses shall be manufactured of non-perishable material and, unless otherwise agreed by BMA, have a minimum diameter of 64mm if unlined or 45mm if lined.

## **4.4 Chapter III: Life-saving Appliances and Arrangements**

*4.4.1 Servicing of inflatable LSA*

Please refer to BMA Information Bulletin No. 98.

*4.4.2 LSA fall wires*

Further information regarding maintenance and renewal of wires for lifeboat falls and appliance-launched liferafts is available in BMA Information Bulletin No. 100.

#### *4.4.3 Safety of lifeboats during abandon ship drills*

The Master has discretion to modify or postpone drills that are required under SOLAS Chapter III. The justification for such an action is to be entered into the Official Log Book and the required drill is to be carried out at the earliest practical opportunity thereafter.

Please refer to BMA Information Bulletin No. 72.

#### *4.4.4 Safety of lifeboat on-load release gear*

Please refer to BMA Information Bulletin No. 87.

#### *4.4.5 Simulated launch of free-fall lifeboats*

The simulated launch of free-fall lifeboats is only acceptable if the guidelines for simulated launching contained within the Appendix to Annex II of MSC.1/Circ.1206 Rev.1 are satisfied.

#### *4.4.6 Fall Preventer Devices (FPDs)*

Please refer to BMA Information Bulletin No.117.

#### *4.4.7 Replacement of lifeboat on-load release gear*

The BMA has for some time allowed the replacement of existing lifeboat on-load release gear with a modern, more stable arrangement. IMO has formalised these procedures in MSC.1/Circ.1392, which should be followed. Any deviations from the procedure outlined in MSC.1/Circ.1392 will be agreed on a case by case basis.

#### *4.4.8 5 Knot installation test after replacement of On-load release gear*

Section 24 of MSC.1/Circ.1392 states that post-installation testing should be carried out by either the manufacturer or one of its representatives. Part of the post-installation tests for cargo ships of 20,000 gross tonnage and over is the 5 knots installation test, which is to be carried out in accordance with Part 2, paragraph 5.4 of IMO Resolution MSC.81(70).

The BMA is aware of safety concerns raised by companies, relating to the launching of lifeboats whilst the ship is underway at 5 knots. Noting these safety concerns, the BMA will give consideration to equivalent means of conducting the 5 knot installation test in a more controlled environment with the ship stationary whilst alongside or at anchor. Equivalent means may include the use of the wash from a vessel positioned forward of the launching position to create a 5 knot current or the use of a 5 knot current from a

river or tidal flow. The agreement of the BMA to any proposed equivalent method is to be sought, prior to conducting the 5 knot test.

Although responsibility for conducting the testing lies with the Release and Retrieval System manufacturer or their representative, where ship's crew are requested by the manufacturer or their representative to assist in the 5 knot test, or agreed equivalent test, the Company is to ensure that suitable safety provisions are in place and that a thorough risk assessment is conducted prior to conducting the 5 knot test, or agreed equivalent test. The following, although not a definitive or exhaustive list, should be taken into consideration by the Company as part of their risk assessment:

- The means by which the objectives of the 5 knot test are to be achieved (e.g. a 5 knot test conducted in accordance with Part 2, paragraph 5.4 of MSC.81(70) or an alternative equivalent means of testing without the need for the ship to move ahead at 5 knots);
- Training and familiarisation of the lifeboat crew in the operation of the new Release and Retrieval System, including practical launching of the lifeboat with the vessel stationary alongside prior to the 5 knot test or agreed equivalent test;
- Adequate provision of Life Saving Appliances and Personal Protective Equipment for all personnel involved in the testing;
- Correct use of the lifeboat painters during testing;
- Provision of an adequately equipped and crewed rescue craft in the water during the testing, to retrieve persons from the water if required;
- Identify the person in charge of the test and identify roles and responsibilities of all personnel involved in the testing;
- Means of communication between the boat crew, person in charge, ship, tugboat (if applicable) & rescue craft;
- Where the 5 knot test is conducted with the ship moving ahead at 5 knots, the ships propeller(s) shall be stopped turning once the vessel is moving forward at 5 knots;
- The lifeboat not being released until it is fully waterborne.

The BMA does not apply a "sister ship" approach when dealing with the 5 knot installation test or agreed equivalent test required after the replacement of hooks.

#### *4.4.9 Equivalent arrangement of lifesaving appliances*

The Bahamas has submitted the following arrangement to IMO (Refer to IMO circular SLS.14/Circ.22):

Cargo vessels of 500 gross tonnage and over, but less than 1,600 gross tonnage, except tankers, may be equipped as follows:

- a. On one side of the ship, a motor lifeboat complying with the standards required for rescue boats, which shall be fitted under an approved launching device. Such motor lifeboat shall be available for immediate use at all times during any voyage. In addition, if the motor lifeboat is not of such capacity to accommodate all on board, one or more life rafts of sufficient aggregate capacity (in conjunction with the capacity of the motor lifeboat) to accommodate the total number of persons on board;
- b. On the other side of the ship, one or more lifeboats or inflatable life rafts of sufficient aggregate capacity to accommodate the total number of persons on

board. If a lifeboat is fitted, it shall be fitted under an appropriate launching device;

- c. In ships where the distance from the embarkation deck to the water in the lightest sea-going condition exceeds 15 feet (4.5 meters) the life rafts required above are to be of the davit launched type and at least one launching device is to be provided on each side of the ship for every two life rafts. The launching device should be capable of lowering the life raft when fully loaded with its full complement of persons and equipment;
- d. In addition to any life rafts required by a. and b. above, further life raft(s) of sufficient aggregate capacity to accommodate at least the total number of persons on board. Life raft(s) shall be stowed as to be able to float free;

NOTE: Each life raft required by Sections a, b, and d above, shall be of approximately the same capacity.

Ships which have arrangements in accordance with the provisions of *SLS.14/Circ.22* shall if applicable, comply with the requirement to be fitted with a rescue boat.

**The provisions of *SLS.14/Circ.22* shall not apply to any ship constructed on or after 01 July 1986.**

#### *4.4.10 Testing of Lifeboats at new construction initial surveys*

The sister ship rule may be applied to the 5 knot launch test required by Para. 5.4 of Part 2 of IMO MSC Resolution MSC.81(70) *Revised recommendation on testing of life-saving appliances*, whereby the test is only necessary for the first vessel of a contracted series of ships with identical arrangements and where the geometry of the lifeboat launching arrangement is also verified as being identical to the first vessel which has been satisfactorily tested.

#### *4.4.11 Immersion Suits on Cargo Ships*

Please refer to BMA Information Bulletin No.76.

#### *4.4.12 Exemption from the carriage of lifeboat food rations and fishing tackle*

All vessels operating within 200 miles from shore may be exempted from the carriage of lifeboat rations and fishing tackle under the provisions of LSA Code 4.4.8.32.

Applications for exemption are to be submitted by the Recognised Organisation in accordance with the guidelines outlined in BMA Information Bulletin No. 8.

Applications relating to offshore units operating outside the 200 mile limit and those undertaking positioning and delivery voyages which take them beyond the 200 mile limit shall be referred to the BMA for consideration on a case by case basis.

#### *4.4.13 Use of knotted ropes as a means of embarkation to remotely located liferafts*

SOLAS Chapter III Regulation 11.7 allows for "other means of embarkation enabling descent to the water in a controlled manner" for liferafts required by SOLAS Chapter III Regulation 31.1.4.

The BMA considers that "other means of embarkation" refers to systems such as descent units, escape chutes, rope ladders etc. Knotted ropes are not acceptable for this purpose.

#### *4.4.14 Carrying capacity of liferafts – average mass of occupants 82.5kg*

In accordance with Chapter IV of the LSA Code, from 01 January 2012 all inflatable and rigid liferafts should be constructed using the assumption that the average mass of occupants is 82.5kg, increased from 75kg.

All ships constructed (having their keel laid) on or after 01 January 2012 should carry liferafts approved on the basis of an average person mass of occupants of 82.5kg. The safe working load (SWL) of any davits used for launching these liferafts should be adequate for their fully laden weight.

All ships constructed before 01 January 2012 may continue to use liferafts approved on the basis of an average person mass of occupants of 75kg. It is acceptable for "75kg liferafts" on these vessels to be exchanged at service intervals with "82.5kg liferafts" and vice versa at a subsequent service. It is also acceptable for these vessels to have both 75kg and 82.5kg liferafts on board at the same time.

On passenger ships constructed before 01 January 2012, IMO MSC circular MSC.1/Circ.1347 permits the determination of the required SWL of a liferaft launching appliance to continue to be based on an assumed occupant mass of 75kg, even though the liferaft has been tested to a higher weight standard. The installation and periodic lowering test should also continue to be based on an assumed occupant mass of 75kg.

On cargo ships constructed before 01 January 2012, any liferaft launching appliance should be based on the occupant number and mass stated on the liferafts it will handle (i.e. 75kg or 82.5kg, as applicable). If the SWL of the launching appliance will be exceeded through the liferaft having been approved to a higher weight standard then it will be necessary for the davit to be reapproved, modified or replaced to achieve the required SWL.

#### *4.4.15 Stored mechanical power for rescue boat davits.*

The Bahamas has submitted the following equivalent arrangement to IMO (Refer to IMO circular SLS.14/Circ.467).

On ships fitted with a six person rescue boat that is NOT one of the ships survival craft and has a weight of 500Kg or less in fully equipped condition, with engine but without crew, the rescue boat davit need not be fitted with stored mechanical power required by Chapter VI, Paragraph 6.1.1.3 of the LSA Code. However, slewing of the davit must be achievable by one person against an adverse list of 20 degrees and trim of 10 degrees. All other aspects of the davit shall comply with paragraphs 6.1.1 and 6.1.2 of the LSA code.

#### *4.4.16 Weight Increase of lifeboats and rescue boats from Water Ingress.*

Where it is suspected that the weight of a lifeboat or rescue boat has increased over its design weight due to water ingress, it is recommended that the guidance contained within the UK MCA's MGN 464 (M+F) be followed for weighing and calculating the weight increase.

If a lifeboat or rescue boat weight exceeds its design weight, the BMA is to be advised in accordance with BMA Information Bulletin No.8. The submission to the BMA shall include details of the boat's design weight, the actual weight recorded and the Recognised Organisation's recommendations for dealing with the affected boat.

### **4.5 Chapter IV: Radiocommunications**

#### *4.5.1 Safety Radio Form R / GMDSS General Operators Certificate*

There is some cross-over between STCW and ITU requirements for the minimum number of radio operators required to be on board. In order to avoid any misinterpretation, the minimum number of radio operators on the Safety Radio Certificate Form R is to be entered as "To comply with the Minimum Safe Manning Document".

#### *4.5.2 Identification Number on 406 MHz EPIRB*

406 MHz EPIRBs are to be programmed only with the MMSI number. If the identification is not the MMSI issued by the BMA, the present identification number shall be advised to the Registrar at the BMA office where the ship is registered and the owner shall be advised that the EPIRB is to be reprogrammed with the correct MMSI number.

A short term certificate may be issued, denoting the outstanding deficiency and limiting the validity of the short term certificate to the next port of call where the required equipment is available. In no case shall the short term certificate exceed two months. If the reprogramming cannot be carried out within that time, the owner shall be advised to replace the existing EPIRB with one that is correctly programmed.

The MMSI number and call sign issued to all vessels are indicated on the Certificate of Registry. The office of ship registry is denoted on the Certificate of Registry by the prefix to the year of registry. L is London, N is Nassau, NY is New York, HK is Hong Kong, P is Piraeus.

#### *4.5.3 Aeronautical VHF equipment on board passenger ships*

SOLAS IV/7.2 requires an aeronautical VHF to be carried on board all passenger vessels in accordance with SOLAS IV Reg.14, of a type approved by the Administration in accordance with IMO Resolutions A.694(17) & MSC.80(70) and the ICAO Convention.

The BMA has been made aware that there are currently no suitably approved units in the market and will therefore grant a general exemption from formal type approval of the Aeronautical VHF, as long as no type approved equipment is found in the market and provided that the Recognised Organisation carries out a technical case-by-case approval of the equipment.

Applications for exemption should be made as per BMA Information Bulletin No.8.

## **4.6 Chapter V: Safety of Navigation**

### *4.6.1 Safe Manning*

Ships shall comply at all times with the requirements of the Minimum Safe Manning Document, issued by the relevant BMA office of registration. This document is also to be referenced in Form R of the Safety Radio Certificate. (See *also separate entries under SOLAS IV, SOLAS IX and STCW*).

The BMA has issued guidance on manning and qualifications. Please refer to BMA Information Bulletin Nos. 103, 104, 105, 106, 107, 108, 115, 118, 121, 124, 129, 130, 135, 137 & 138.

Any applications for exemptions or dispensations from the required manning shall be directed to the BMA in accordance with BMA Information Bulletin No. 115.

### *4.6.2 Official Language*

The official language of The Bahamas is English and it is therefore necessary for a correctly revised English version of all plans, record books, lists and other relevant documents to be available on board. (See *also separate entry under SOLAS Chapter IX*).

### *4.6.3 Working Language*

As per SOLAS V/14, the working language of the ship shall be established by the Company, or the master, as appropriate, and recorded in the Official Log Book.

Each seafarer shall be required to understand and, where appropriate, give orders and instructions and to report back in that language.

### *4.6.4 Bridge visibility*

Ships constructed prior to 01 July 1998 which undergo repairs, alterations and modifications of a major character (according to the criteria in *IMO Maritime Safety Committee (MSC) Circular MSC/Circ.1246*), shall comply to the maximum extent practicable with the requirements of SOLAS Chapter V requirements. Any areas of non-compliance shall be brought to the attention of the BMA.

### *4.6.5 Bridge height of eye requirement*

Current SOLAS requirement is for bridge height of eye to be 1800mm. There is a provision under SOLAS to reduce the height of eye to 1600mm.

In view of the possibility of crews changing and available statistics showing a distinct trend for all nationalities becoming taller in the near future, newly constructed vessels shall comply fully with SOLAS Chapter V requirements and there is generally no allowable reduction in height of eye from the 1800mm standard.

Exceptions will be considered by the BMA on a case by case basis for special type ships with unique construction features and ships which have been constructed to the standards of another SOLAS contracting State.

#### 4.6.6 *Steering gear testing and drills*

For ships regularly engaged on voyages of short duration, the requirement to carry out the checks and tests of the steering gear specified in SOLAS V/26.1 & 26.2 may be waived, as per the provisions of SOLAS V/26.5, provided that those checks and tests are carried out at least weekly. Applications for such a waiver shall be submitted by the Recognised Organisation, in accordance with BMA Information Bulletin No.8.

#### 4.6.7 *Radar carriage*

As per SOLAS V/2.7.1, an Administration may allow the fitting of two 3cm/9 GHz/"X-band" radars. The Bahamas will not ordinarily allow the fitting of two similar radars for the reason that the 10cm/3 GHz/"S-band" and 3cm/9 GHz/"X-band" radars are able to supply more comprehensive data under a variety of conditions.

Any applications to fit two 3cm/9 GHz/"X-band" radars are to be made by the Company via the Recognised Organisation in accordance with BMA Information Bulletin No.8. It should be noted that, as a matter of policy, the BMA does NOT consider commercial or financial convenience a valid reason to replace an existing 10cm/3 GHz/"S-band" radar with a 3cm/9 GHz/"X-band" radar.

#### 4.6.8 *Long Range Identification and Tracking (LRIT)*

The BMA has issued guidance and instructions. Please refer to BMA Information Bulletin Nos. 111, 116 & 125.

#### 4.6.9 *Bridge Navigational Watch Alarm System (BNWAS)*

BNWAS equipment installed prior to 1 July 2011, and for which conformance with MSC.128(75) cannot be documented, can be accepted as fulfilling the intention of SOLAS Ch.V Reg.19.2.2.4 when the system is provided with the following functionalities:

- i. The system can be manually switched ON and OFF, and the ON/OFF selection facilities are protected by key switch, password protection or other means or by location in the Master's cabin.
- ii. The system remains dormant for a period of between 3 and 12 minutes when switched on.
- iii. A visual indication and an audible alarm are given in the wheelhouse at the end of the dormant period. For the first 15 seconds a visual indication may be given only.
- iv. The alarm is transferred to the back-up officer's and/or Master's cabin if not reset in the wheelhouse within 30 seconds.

- v. The alarm is sounded in public spaces (e.g. mess room, ship's office, conference room or similar) if not reset within 30 to 90 seconds from the first visual indication in wheelhouse (the period may be extended to 3 minutes for larger vessels). This alarm may be combined with the alarm described in item iv above.
- vi. An alarm reset function is provided in the wheelhouse, e.g. push button(s), motion detectors conforming to standards laid down by the IMO, or other positive means in position(s) providing a proper look out.

Requests for acceptance of such arrangements are to be made via the Recognised Organisation in accordance with BMA Information Bulletin No. 8.

#### *4.6.10 Exemption from Carriage of BNWAS on certain ship types*

The BMA will consider exemption from BNWAS for certain ship types operating in the offshore sector and to offshore vessels that are being towed to and from working areas. Exemptions from the carriage of BNWAS will be granted only where suitable arrangements have been made for watch keeping, with the procedures detailed in the safety management system.

Applications for exemption are to be made via the Recognised Organisation in accordance with BMA Information Bulletin No.8. All relevant documentation and procedures must be provided with the application.

#### *4.6.11 Interfacing of BNWAS with Voyage Data Recorders (VDR) and Simplified Voyage Data Recorders (S-VDR).*

Section 5.4 of IMO Resolution A.861(20) identifies items to be recorded on a VDR. Paragraph 5.4.9, *Main alarms*, states: "*This should include the status of all mandatory alarms on the bridge*". The BMA considers the BNWAS to be a mandatory alarm on the bridge; therefore, the status of the BNWAS is to be recorded by the VDR.

New ships are expected to have a connection between VDR and BNWAS. Where a BNWAS is being installed on an existing ship fitted with a VDR and it is not possible to connect the VDR and BNWAS, the Recognised Organisation shall make a suitable recommendation to the BMA for exemption in accordance with BMA Information Bulletin No.8.

For existing ships fitted with an S-VDR the BNWAS need only be connected to the S-VDR where it is possible to do so, as per the international digital interface standards identified in paragraph 5.4.9 of Resolution MSC.163(78).

#### *4.6.12 Adjustment of magnetic compasses*

SOLAS V/19.2.1 requires all ships to have "*...a properly adjusted magnetic compass, or other means, independent of any power supply to determine the ship's heading and display the reading at the main steering position*" and "*...means of correcting heading and bearings to true at all times*".

SOLAS does not specify a time interval for compass adjustment however the following is a guide to ensuring that the magnetic compass remains "properly adjusted."

a) If the deviation is checked regularly, a deviation log book is kept and the deviations remain steady, there is no requirement to undertake an annual adjustment.

b) Any ship shall have a workable deviation card for the main magnetic compass or standard compass binnacle position and for any separate 'steering compass' binnacle. The deviation card will be obtained after building and thereafter the deviations on that card must be frequently verified, based upon 'professional standards'. Verification should take place at least daily, weather permitting, by taking 'compass errors' and recording these in the 'Compass Error Book', or similar. Providing that the deviations obtained from these 'error calculations' are within an acceptable tolerance of the deviation card, that is considered to be satisfactory proof of maintenance of the magnetic compass deviations. There is no reason for a compass to be adjusted if the regular pattern of recorded compass errors is compatible with the deviation card.

- c) The circumstances under which a compass *may* require adjustment include:
- Calculated deviations falling outside the 'acceptable tolerance' (note that some Administrations use a figure of +/- 5°);
  - Major structural works on the existing vessel that can change the ship's magnetic signature;
  - Conversion of the vessel from one use to another or lengthening;
  - Installation of new machinery - major machinery anywhere on the vessel; smaller machinery closer to the compass(es);
  - Installation or exchanging electrical equipment in the area of the compass(es). Note must be taken, when installing or exchanging electrical equipment of the recommended distance of that installation from the magnetic compasses. It must be remembered and considered that such distances are the minimum distance between these units but that electrical equipment can have a minor effect at greater distances than those minima;
  - Installation or exchanging of radio transmitting equipment;
  - Extended dry docking;
  - The Deviation Card on container ships can be different depending upon the quantity and height of the deck load. Solutions to this can include two of three Deviation Cards to cover the various cargo loads;
  - Specialist heavy lift vessels also require particular attention when carrying large metallic (ferrous) loads such a container gantries, oil rigs, etc.

Port/Coastal State requirements should also be taken into account.

#### *4.6.13 Carriage of gyro compasses in lieu of magnetic compass on certain ship types*

The Bahamas has submitted the following arrangement to IMO (Refer to IMO circular SLS.14/Circ.412):

All ships flying the flag of the Government of the Commonwealth of The Bahamas may, instead of complying with the requirements of SOLAS V/19.2.1.1 and V/19.2.2.1 to carry a magnetic compass, comply with the following equivalent arrangement:

1. The ship shall be fitted with at least two gyro compasses determining the ships heading and display this heading, being readable by the helmsman at the main steering position;
2. At least two of the gyro compasses shall have separate power supplies, which shall be connected to the main and emergency sources of power;
3. At least two of the gyro compasses shall have an independent uninterruptable power supply with at least 30 minutes usable power.

One of the above mentioned gyro compasses is also deemed to be suitable to meet the provisions of SOLAS V/19.2.5.1 for a gyro-compass to be carried on vessels of 500 gross tonnage and over, providing that it also meets the provisions of SOLAS V/19.2.3.2, V/19.2.4 and V/19.2.5.5.

#### *4.6.14 Performance Standards for Bridge Alert Management*

Recognising that bridge alarms can be a source of distraction to the bridge team, particularly during an incident, the BMA encourages the use of MSC.302(87) *Bridge Alert Management* on all ships constructed after 01 July 2014.

### **4.7 Chapter VI: Carriage of Cargoes**

#### *4.7.1 Prohibition on Physical Blending of Bulk Liquid Cargoes at Sea*

As per Regulation SOLAS VI/5-2, the physical blending of bulk liquid cargoes during sea voyages is not permitted. Physical blending refers to the process whereby the ship's cargo pumps and pipelines are used to internally circulate two or more different cargoes with the intent to achieve a cargo with a new product designation.

This prohibition does not preclude the master from undertaking cargo transfers for the safety of the ship or protection of the marine environment and does not apply to the blending of products for use in the search and exploitation of seabed mineral resources on board ships used to facilitate such operations.

### **4.8 Chapter VII: Carriage of Dangerous Goods**

#### *4.8.1 General*

The Bahamas Maritime Authority advises that any ship which complies with SOLAS II-2/19 (footnote to SOLAS VII/7-1 refers), is suitably equipped to carry dangerous goods. Such cargo when carried in bulk is to comply with the carriage requirements of SOLAS VII/7-5, i.e. the carriage of dangerous goods in solid form in bulk shall be in compliance with the relevant provisions of the IMSBC Code, as defined in regulation VI/1.1.

Where a cargo is also identified as a substance in the IMDG Code, it shall only be considered in the appropriate context (i.e. bulk cargo or packaged goods). IMDG Code requirements cannot be applied simultaneously with IMSBC Code requirements, unless as expressed by IMO guidance.

#### *4.8.2 Carriage of Radioactive Substances*

Radioactive substances shall not be carried on board Bahamian ships.

Exceptions may be made for IMDG Code class 7 radioactive materials in packaged form used in medical and public health applications. Exceptions may also be made where the radioactive substance is of a grade and quantity suitable for other civil use, such as non-destructive testing. Recognised Organisations should be guided by *IMO Assembly Resolution A.984 (24)*.

For the avoidance of doubt, the carriage of Class 7 radioactive materials in bulk is not permitted on Bahamian ships.

#### **4.9 Chapter VIII: Nuclear Ships**

The BMA currently has no special instructions.

#### **4.10 Chapter IX: Management for the Safe Operation of Ships**

##### *4.10.1 Application of ISM Code*

The BMA has issued guidance and instruction on the application of the ISM Code. Please refer to BMA Information Bulletin No. 23.

##### *4.10.2 First issue of an ISM Document of Compliance (DOC)*

**Recognised Organisations shall advise the BMA of any request for audit in connection with the first issuance of a Bahamas DOC, prior to undertaking the audit.** The BMA will assess the suitability of the applicant prior to agreeing with the Recognised Organisation for the initial DOC audit to be carried out.

##### *4.10.3 Language to be used in the Safety Management System*

The language used is to be the working language of the Company and ship's crew, in accordance with ISM Code Section 6.6. However, the official language on Bahamian flagged ships is English and it is therefore necessary for a correctly revised English version of the SMS to be available on board and ashore for third party inspection and audit at all times.

##### *4.10.4 Safety of lifeboats during abandon ship drills*

The MSC Circulars relevant to this subject are to be applied in order to reduce accidents whilst launching and recovering lifeboats during abandon ship drills.

Failure to carry out any of the following is to be considered a non-conformity and as an "operational failure":

- the required maintenance and recording activities required by the above circulars;
- abandon ship drills without a suitable explanation entered into the Official Log Book; or
- the required drills within the scope of any exemption allowable by SOLAS Chapter III requirements and BMA Information Bulletin No. 72.

Please refer to BMA Information Bulletin No. 72.

#### *4.10.5 Safe manning levels*

All vessels are to comply with the requirements of the Safe Manning Document at all times. Failure to do so is considered a:

- Breach of Section 67 of the Bahamas Merchant Shipping Act; and
- Major non-conformity under section 6 of the ISM Code.

In such cases, the BMA shall be advised immediately.

Recognised Organisations are to verify that:

- Shipboard familiarisation has been undertaken;
- All persons have medical certificates and appropriate documentary evidence of training;
- All persons who have been assigned emergency duties are accounted for on the Muster List;
- All survival craft are manned by duly qualified persons;
- The ship is being safely operated in accordance with STCW and MLC 2006 requirements. This can be achieved by examining entries in the ships' log books and record of hours of work or rest, and taking interviews. The guidance given in STCW Code Section B-VIII is to be taken into account.

The BMA has issued guidance on manning and qualification of persons on board. Please refer to BMA Information Bulletin Nos. 86, 103, 104, 105, 106, 107, 108, 115, 118, 121, 124, 129, 130, 135, 137 & 138. See also BMA Technical Alert No. 14-08.

#### *4.10.6 Flag State File*

A Flag State file shall be maintained on board every Bahamian ship in either hard copy or electronically. This file is to incorporate current revisions of BMA Information Bulletins and notices and a current revision of the Bahamas National Requirements. The carriage of the Flag State file is to be verified during SMC audits and Bahamas annual inspections.

#### *4.10.7 Bahamas Annual Safety Inspection*

At SMC audits, Recognised Organisations shall confirm that the Bahamas annual safety inspection is within due date and a valid Certificate of Inspection is displayed in a prominent position. Follow up actions necessary to rectify any deficiencies found at the last annual inspection should also be verified. Further information is available in BMA Information Bulletin No.66.

#### *4.10.8 IACS PR17 - Reporting by Surveyors of Deficiencies relating to Possible Safety Management System Failures*

Copies of all PR17 reports issued against a Bahamian ship are to be electronically copied to the BMA for review, when forwarded by the PR17 issuing Recognised Organisation to the ISM issuing body.

#### *4.10.9 Audit reporting*

Copies of DOC and SMC audit reports resulting in a major non-conformity shall be forwarded to the BMA by email, regardless of any subsequent downgrading or deletion. Major non-conformities arising from an audit are to be reported at the earliest opportunity but within three working days, regardless of any subsequent downgrading or deletion.

#### **4.11 Chapter X: Safety Measures for High-speed Craft**

##### *4.11.1 General*

Recognised Organisations are authorised to conduct surveys, review plans and issue certification in respect of the Code of Safety for Dynamically Supported Craft (DSC Code), the International Code of Safety for High Speed Craft, 1994 (the 1994 HSC Code) and the International Code of Safety for High-Speed Craft, 2000 (2000 HSC Code).

Amendments to the DSC and HSC Codes are to be applied to vessels according to the original intended application, unless otherwise stated.

When reviewing plans and conducting surveys in connection with these and subsequent amendments, the principles contained in BMA Information Bulletin No. 8 are to be utilised in order to assess the practicality of complying with the additional requirements.

Where applicable, Recognised Organisations shall verify that the vessel complies with the conditions, including manning and qualification of the Officers and ratings, specified in the vessel's Permit to Operate.

See also Section 13 & 14.

#### **4.12 Chapter XI-1: Measures to Enhance Maritime Safety**

##### *4.12.1 IMO Number*

The BMA has issued guidance and instructions for the Company and Registered Owner IMO number. Please refer to BMA Information Bulletin No. 109.

##### *4.12.2 Continuous Synopsis Record*

The BMA has issued guidance and instructions. Please refer to BMA Information Bulletin No. 57.

#### **4.13 Chapter XI-2: Measures to Enhance Maritime Security**

The BMA has issued guidance and instructions. Please refer to BMA Information Bulletin Nos. 70, 119 & 128.

#### **4.14 Chapter XII: Additional Safety Measures for Bulk Carriers**

Bulk carriers constructed on or after 01 January 2016 shall fully comply with the requirements of SOLAS Chapter XII, unless otherwise agreed by the BMA.

MSC.277(85) is not mandatory for ships flying The Bahamas flag.

## **5 International Convention For The Prevention Of Pollution From Ships (MARPOL)**

### **5.1 Annex I: Prevention of Pollution by Oil**

#### *5.1.1 Phasing out of single hull tankers*

“Single hull” tankers subject to MARPOL Annex 1, Regulation 20, are not accepted for registration except where they are to be converted to other vessel types (e.g. Bulk Carrier, FPSO, etc.). Such vessels are not permitted to trade as tankers after registration in The Bahamas.

Single hull tankers which are already registered in The Bahamas and have been allowed to continue trading are subject to additional requirements.

Where a void space is created by a change of use of ship’s side or bottom tanks in conjunction with the creation of a double side or double bottom configuration, such spaces must be coated and maintained to the same standard as that required for ballast tanks under the requirements of SOLAS Chapter II-1, as adopted by *IMO Resolution MSC.47(66)*, regardless of vessel age.

Please refer to BMA Information Bulletin No.74.

#### *5.1.2 Condition Assessment Scheme (CAS) Survey*

The BMA requires owners to provide a copy of the CAS survey plan, agreed with and endorsed by the Recognised Organisation. A plan, sufficient to identify the main structural elements of the ship, shall be included in the information provided to the BMA.

Please refer to BMA Information Bulletin No.69.

#### *5.1.3 FPSO / FSU*

The Bahamas gives full effect to *IMO Resolution MEPC.139(53) “Guidelines for the application of the revised MARPOL Annex 1 requirements to floating production, storage and offloading facilities (FPSOs) and Floating Storage Units (FSUs)”*, as amended by MEPC.142(54). The resolution is applied in its entirety except as detailed in BMA Information Bulletin No. 94.

#### *5.1.4 Shipboard Oil Pollution Emergency Plan (SOPEP)*

SOPEPs approved by any Recognised Organisation on behalf of other Administrations, or approved directly by other Administrations, are not acceptable. Accordingly, the SOPEP is to be approved on behalf of The Commonwealth of The Bahamas by a Bahamas Recognised Organisation when the vessel joins the Registry.

### *5.1.5 Oil Record Book*

The BMA has issued guidance on the information to be entered into the Oil Record Book (Parts I & II). Please refer to BMA Information Bulletin No.84.

### *5.1.6 Sludge Tank Discharge Piping*

Regulation 12.2.2 is to be applied to ships delivered on or after 1 January 2014, in accordance with MEPC.1/Circ.753/Rev.1.

### *5.1.7 Ship to Ship Transfer (STS) Operations Plan*

Oil tankers of 150 gross tonnage and above, engaged in the transfer of oil cargo between oil tankers at sea (STS operations), shall carry an STS operations plan.

STS operations plans approved by any Recognised Organisation on behalf of other Administrations, or approved directly by other Administrations, are not acceptable. Accordingly, the STS operations plan is to be approved on behalf of The Commonwealth of The Bahamas by a Bahamas Recognised Organisation when the vessel joins the Registry.

### *5.1.8 Biofuel blends and on board blending*

Biofuels and biofuel blends should be carried in accordance with MEPC.1/Circ.761/Rev.1, *2011 Guidelines for the Carriage of Blends of Petroleum Oil and Biofuels, as amended*.

### *5.1.9 Biofuel blends and Oil Discharge Monitoring & Control Equipment (ODME)*

Biofuel blends containing 75% or more of petroleum oil are subject to Annex I of MARPOL. When carrying such biofuel blends, Oil Discharge Monitoring & Control Equipment (ODME) shall be in compliance with MARPOL I/31 and approved for the mixture being transported. ODME systems fitted on or after 01 January 2016 are to be approved under MEPC.108(49), as amended by MEPC.240(65).

In accordance with MEPC.1/Circ.761/Rev.1, oil tankers constructed on or after 01 January 2005, carrying biofuel blends, should have ODME equipment complying with MEPC.108(49), as amended by MEPC.240(65), installed by not later than 01 January 2016.

Until 01 January 2016, biofuel blends may be carried when the ODME is not approved for the mixture being transported, provided that tank residues and all tank washings are pumped ashore.

## **5.2 Annex II: Control of Pollution by Noxious Liquid Substances in Bulk**

### *5.2.1 Carriage of Vegetable oil*

The BMA has issued guidance on the carriage of vegetable oil. Refer to BMA Information Bulletin No. 90.

### 5.2.2 Dual Certificates of Fitness

The BMA allows the issue of dual certificates of fitness for Type 2 chemical tankers that also comply with the requirements for Type 3 vessels carrying vegetable oils.

Dual certificates of fitness may be directly issued to a vessel, however the BMA shall be notified of such cases.

When a vessel is issued dual certificates of fitness, the unused certificate must be placed in a sealed envelope.

Where there is no change to the physical arrangements on board related to the certificate of fitness, the following procedures are to be in place:

- The process for changing the certificate of fitness is to be described in the Safety Management System;
- The Company is to inform the Recognised Organisation each time the certificate of fitness is changed;
- The ship must comply fully with all requirements appropriate for the ship type corresponding to the certificate of fitness;
- Only one certificate of fitness shall be in use at any time;
- The Master is to make an entry in the ship's Official Log Book on every occasion that the certificate of fitness is changed;
- The Recognised Organisation is to ensure that both certificates of fitness are endorsed at annual, intermediate and renewal surveys and check the cargo list against the certificate of fitness;
- Recognised Organisations are to ensure that the above procedures are in place when conducting ISM audits.

Where there is a change in physical arrangements on board related to the certificate of fitness, the above is to be verified at the change of certificates by a Recognised Organisation surveyor.

### 5.2.3 Shipboard Marine Pollution Emergency Plan (SMPEP)

SMPEPs approved by any Recognised Organisation on behalf of other Administrations, or approved directly by other Administrations, are not acceptable. Accordingly, the SMPEP is to be approved on behalf of The Commonwealth of The Bahamas by a Bahamas Recognised Organisation when the vessel joins the Registry.

### 5.2.4 Tank Stripping tests

Stripping tests required by MARPOL Annex II, Regulations 12.1, 12.2 & 12.3 are to be carried out at initial and renewal surveys for all ships to which these regulations apply. The minimum extent of testing is to be in accordance with paragraph 1.2.2 of Appendix V of MARPOL Annex II provided at least one tank of each similar type is tested to the satisfaction of the attending Recognised Organisation surveyor.

In the application of Paragraph 1.2.2 of Appendix V of MARPOL Annex II, the BMA considers that a "similar tank" is a "similar tank" on the same ship, not a "similar tank" on a sister ship.

### **5.3 Annex III: Prevention of Pollution by Harmful Substances carried by Sea in Packaged Form**

There are no survey or certification requirements for Annex III. There are currently no special instructions.

### **5.4 Annex IV: Prevention of Pollution by Sewage from Ships**

#### *5.4.1 Status of Annex IV*

The Bahamas is not a signatory to Annex IV at this time. **However, the provisions of Annex IV relating to ships are applied in full to all Bahamian ships.**

The Bahamas position is outlined in IMO circular MEPC.1/Circ.633.

#### *5.4.2 Survey and Certification*

Recognised Organisations are authorised to conduct Annex IV surveys on behalf of the Commonwealth of The Bahamas and issue a Statement of Compliance, in lieu of a Convention certificate, on satisfactory completion of survey.

### **5.5 Annex V: Prevention of Pollution by Garbage from Ships**

#### *5.5.1 General*

#### *5.5.2 Survey & Certification*

#### *5.5.3 Placards, Garbage Management Plans & Record Keeping*

There are no survey or certification requirements for Annex V.

#### *5.5.4 Discharge of boiler and/or economiser washwater*

Paragraph 1.7.3 of MEPC.219(63) provides a non-exhaustive list of discharges considered essential to the operation of a ship. In the opinion of the BMA, the discharge of boiler/economiser washdown water (soot drains), where essential to the operation of the ship, should be treated in the same manner as the examples listed in para. 1.7.3 of MEPC.219(63) and should not be considered 'operational waste' as defined in MARPOL V/1.12. As such there should be no obligation to handle such discharges as "garbage".

Notwithstanding the above, it is the responsibility of the Company, to ensure that this interpretation is shared by individual port States, if applicable.

### **5.6 Annex VI: Prevention of Air Pollution from Ships**

The BMA has issued guidance on MARPOL Annex VI.

Please refer to BMA Information Bulletin No.75.

## **6 Convention on the International Regulations for Preventing Collisions At Sea 1974 (COLREGs)**

### *6.1.1 Rule 23*

With reference to the requirement in rule 23(a)(ii) for a second masthead light for vessels over 50 metres in length, the BMA will not ordinarily approve any request for exemption from this requirement. Where a ship has an existing exemption from this requirement issued by another Administration, the BMA will allow a temporary exemption to the first scheduled dry docking, where a second light is to be fitted.

All applications for exemption are to be submitted by the Recognised Organisation in accordance with BMA Information Bulletin No. 8.

### *6.1.2 Rules 27 and 28*

With reference to lights required to be displayed for rule 27 - "*Vessels not under command or restricted in their ability to manoeuvre*" and rule 28 - "*Vessels constrained by their draught*", permanent fixture is not required. However there must be adequate means of hoisting them and there must be a ready source of electrical power available for these lights.

### *6.1.3 Part C and Annex I*

Any modification of an existing vessel or any new vessel with novel arrangements which result in non-compliance with any of the requirements of Part C and Annex I of the COLREGs shall be assessed in accordance with BMA Information Bulletin No. 8. In reviewing any application, the Recognised Organisation shall ensure that effective operational measures have been introduced.

If an arrangement is accepted, the information shall be displayed in the navigating space so as to be readily available for the Officer in Charge of the Navigation Watch.

## **7 International Convention for the Control and Management of Ship's Ballast Water and Sediments (Ballast Water Convention)**

### **7.1 General**

The Bahamas has not ratified the Ballast Water Convention owing to concerns over sampling and Port State Control matters.

It is intended that the survey and certification process will be limited to the Recognised Organisation that classes the ship.

Ships voluntarily complying before ratification or entry into force of the Convention may, after survey, be issued with a Statement of Compliance, which shall be maintained by annual / intermediate endorsement.

## **7.2 Ballast water management plans**

Ballast water management plans shall be approved in accordance with the guidelines outlined in IMO Resolution MEPC.127(53) *Guidelines for Ballast Water Management and Development of Ballast Water Management Plans (G4)*, only by the Recognised Organisation which classes the ship.

## **7.3 Implementation dates**

Regulation B-3 of the Ballast Water Convention specifies implementation dates for compliance with Regulations D-1 and D-2 of the Convention. As the Convention has not yet entered into force, the dates specified in Regulation B-3 have passed. The Convention cannot be amended until it enters into force.

Notwithstanding the provisions of the Convention, IMO Assembly Resolution A.1088(24) adjusts the implementation dates and should be followed when the Convention enters into force, until Regulation B-3 is amended.

## **7.4 Acceptance and approval of ballast water treatment systems**

### *7.4.1 Approval of ballast water treatment systems under the G8 & G9 guidelines by a Bahamas Recognised Organisation*

Ballast water treatment systems approved by a Bahamas Recognised Organisation, in accordance with MEPC.174(58) *Guidelines for Approval of Ballast Water Management Systems (G8)* or MEPC.169(57) *Procedure for Approval of Ballast Water Management Systems that make use of Active Substances (G9)*, are accepted for use on Bahamian ships.

### *7.4.2 Acceptance of ballast water treatment systems approved by other Administrations under the G8 guidelines*

Ballast water treatment systems that have been approved by another Administration, in accordance with MEPC.174(58) *Guidelines for Approval of Ballast Water Management Systems (G8)*, will be considered for acceptance on a case-by-case basis.

### *7.4.3 Acceptance of ballast water treatment systems approved by other Administrations & IMO under the G9 guidelines*

Ballast water treatment systems that have received final approval from another Administration and IMO, in accordance with MEPC.169(57) *Procedure for Approval of Ballast Water Management Systems that make use of Active Substances (G9)*, and are listed in Annex 2 of BWM.2/Circ.34/Rev.2 as amended, will be considered for acceptance on a case-by-case basis.

## **7.5 Survey requirements**

There are currently no special instructions.

## **8 International Convention on the Control of Harmful Anti-Fouling Systems on Ships (AFS Convention)**

### **8.1 General**

The AFS Convention entered into force on 17 September 2008. Article 4(2) of the Convention allowed for the status quo for coatings for a period not exceeding 60 months following application.

### **8.2 MODUs and Offshore Units**

Offshore units and MODUs constructed prior to 01 January 2003 which have not undergone a bottom survey in dry dock, do not need to comply with the AFS Convention until the first bottom survey in dry dock.

## **9 International Convention on Load Lines 1966 and 1988 Protocol**

### **9.1 General**

Recognised Organisations are authorised to conduct surveys and inspections required by the International Convention on Load Lines, 1966 and 1988 protocol, on behalf of the Commonwealth of The Bahamas and to issue the relevant certificate. This includes authorisation to complete the stability review.

### **9.2 Multiple Load Line Certificates**

Multiple load line certificates may be directly issued to a vessel. However, the BMA shall be notified of such cases and advised of the vessel's highest deadweight tonnage.

When a vessel is issued multiple load line certificates, the unused certificates must be placed in a sealed envelope and kept in the custody of the Master.

The following must be verified for issuance or change of Load Lines:

- The ship must comply fully with all statutory requirements appropriate for a ship of the maximum deadweight corresponding to the minimum freeboard assigned in the certificates issued;
- There must be no reduction in safety standards when sailing at a reduced deadweight;
- Only one set of load line marks shall be on display at any time, and the other sets shall be obliterated by paint;
- The Master must ensure, with a Recognised Organisation surveyor in attendance, that the correct set of marks are displayed together with the corresponding load line certificate, that the other sets of marks are properly obliterated, and that the other load line certificates are in safekeeping and not on display. In the case of Recognised Organisation surveyor unavailability, the change of load line may be carried out on the Master's instructions, provided that arrangements for verification at the next available port have been agreed with the Recognised Organisation;
- The Master is to make an entry in the ship's Official Log Book on every occasion that the load line marks are changed;

- The Master is to ensure that all marks are verified and all their corresponding load line certificates endorsed at each subsequent load line inspection.

## **10 International Convention on Tonnage Measurement of Ships 1969**

### **10.1 General**

Recognised Organisations are authorised to conduct tonnage survey and certification. All ships are to be measured under the International Convention on Tonnage Measurement, 1969, as amended.

### **10.2 New buildings and conversions**

For new build ships or existing Bahamian ships undergoing major conversion, the initial certificate of survey and tonnage certificate are to be issued prior to provisional registration or on completion of the conversion, unless otherwise agreed between the Registrar and the Recognised Organisation.

The initial International Tonnage Certificates must be forwarded to the BMA office where the ship is registered (London, Nassau, New York, Hong Kong or Piraeus), without due delay. The office of ship registry is denoted on the Certificate of Registry by the prefix to the year of registry; L is London, N is Nassau, NY is New York, HK is Hong Kong, P is Piraeus.

If the office of ship registry is not known, the International Tonnage Certificate is to be forwarded to the BMA London office.

### **10.3 Change of flag**

For existing ships changing flag to The Bahamas, the certificate of survey and tonnage certificate issued under the losing flag are to be provided before registration of the ship. The Bahamas Certificate of Survey and Tonnage certificate are to be issued at, or as soon as possible after, registration and subsequent change of flag, but in any case no longer than three months after the change of flag as per provisions of Tonnage Convention Article 10(3).

## **11 International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978, as amended (STCW)**

The BMA has issued guidance on manning and qualification of seafarers. Please refer to BMA Information Bulletin Nos. 86, 103, 104, 105, 106, 107, 108, 115, 118, 121, 124, 129, 130, 135, 137, 138, 140, 144, 147 & 151.

## **12 ILO Conventions**

### **12.1 ILO Convention Ratifications**

The Bahamas has ratified the following conventions, relevant to the Bahamas fleet:

- ILO Convention 7: Minimum age at sea
- ILO Convention 22: Seaman's articles of agreement
- ILO Convention 147: Merchant Shipping (Minimum Standards)
- ILO Maritime Labour Convention, 2006
- 

## **12.2 Maritime Labour Convention, 2006 (MLC 2006)**

### *12.2.1 General*

The Maritime Labour Convention, 2006 (MLC 2006), entered into force for The Bahamas on **20 August 2013**.

**MLC 2006 applies to all ships**, except where specified in BMA Information Bulletin No.127.

All ships under 500 gross tonnage must comply with the Convention but do not require certification.

The BMA will authorise the issue of a Maritime Labour Certificate for ships to which the MLC 2006 does not apply, or ships under 500 gross tonnage, upon application by the ship owner.

The BMA has issued extensive guidance on the application of MLC 2006. Please refer to BMA Information Bulletin Nos. 103, 107, 108, 115, 127, 139, 140, 141, 142, 143, 144, 145, 146, 147 and 148.

### *12.2.2 Exemptions, equivalence, dispensations and interpretations*

All applications for exemption, equivalence, dispensations, etc. from MLC 2006 requirements, except as noted in paragraph 12.3.2 below, are to be made direct to the BMA by the shipowner, with relevant supporting information. Requests for interpretation of MLC 2006 are also to be addressed direct to the BMA.

## **12.3 Crew Accommodation**

### *12.3.1 Ships with keel laid before 20 August 2013*

The protocol to ILO Convention 147 (which includes ILO Convention 133) has not been ratified by The Bahamas. However, The Bahamas Merchant Shipping (Crew Accommodation) Regulations are intended to give effect to ILO Convention 133 standards, which are supplementary to ILO Convention 92. Therefore, accommodation on board Bahamian ships with a keel laying date before 20 August 2013 shall be surveyed for compliance with the Bahamas Merchant Shipping (Crew Accommodation) Regulations utilising the standards set out in ILO Convention 133.

The BMA will consider relaxations or exemptions from the provisions of the Merchant Shipping (Crew Accommodation) Regulations and/or ILO 133 requirements where appropriate. Some common examples are:

- Common mess room facilities;

- Deviation from required cabin arrangements;
- Toilet and shower facilities.

Any requests for exemptions are to be made via the Recognised Organisation as per BMA Information Bulletin No.8.

Any exemptions issued on behalf of The Bahamas shall contain the caveat that conditions not in accordance with Bahamas Merchant Shipping (Crew Accommodation) Regulations must be acceptable to the affected joining crew member(s) and also the relevant seafarer's representative body or union.

#### *12.3.2 Crew Accommodation – ships with keel laid on or after 20 August 2013*

Accommodation on board Bahamian ships with a keel laying date on or after 20 August 2013 shall be surveyed for compliance with the Bahamas Merchant Shipping (Maritime Labour Convention) Regulations utilising the standards set out in MLC 2006 and the guidance in BMA Information Bulletin No.139.

Any requests for exemptions related to the construction and equipment requirements of MLC, 2006 are to be made via the Recognised Organisation as per BMA Information Bulletin No.8.

### **12.4 Medical Scales**

#### *12.4.1 Carriage Requirements*

Medical stores on board Bahamian ships should comply with the Merchant Shipping (Medical Stores) Regulations 1986, as amended. These are in line with the United Kingdom Maritime & Coastguard Agency (MCA) scales contained in MSN 1768 (M+F). Alternatively, the World Health Organization (WHO) *International Medical Guide for Ships*, 3<sup>rd</sup> Edition may be used as an equivalent.

The quantity of stores required depends on voyage type and vessel type.

The medical locker shall be inspected at least once every 12 months, in accordance with Regulation 24(6) of the Merchant Shipping (Maritime Labour Convention) Regulations 2012. This inspection shall be recorded in the Official Log Book.

All medicines and stores are to be properly stowed and in date for the intended voyage.

Vessels that carry dangerous goods are to comply with the additional medical stores requirement contained within the IMDG Code.

#### *12.4.2 Medical Oxygen Sets*

Medical Oxygen cylinders should be sent ashore for refill/refreshment as per the manufacturer's instructions or the expiry date marked on individual cylinders.

Pressure regulators for medical oxygen require periodic servicing as per the manufacturer's instructions. Only suitably trained and qualified persons, experienced in the servicing of oxygen regulators, should undertake servicing of oxygen equipment.

Contamination of oxygen systems with oil or grease may result in an explosion and care must therefore be taken to ensure that all parts of the oxygen system are kept free of oil and grease.

Hydrostatic pressure testing of medical oxygen cylinders shall be undertaken at least once every 5 years, or on a more frequent basis if required by the manufacturer's instructions.

## **12.5 Fresh & Potable Water**

### *12.5.1 Fresh & Potable Water Disinfection*

Fresh and potable water is to be treated in accordance with the Bahamas Merchant Shipping (Crew Accommodation) Regulations, as amended. The guidance provided in the World Health Organisation (WHO) *Guidelines for Drinking Water Quality* or the United Kingdom MCA document MGN 397 (M+F) should be taken into account.

### *12.5.2 Use of Plastic Pipework in Domestic Fresh Water Systems*

The BMA accepts the use of plastic pipework in domestic fresh water systems that complies with the requirements of IMO Assembly Resolution A.753(18), as amended by IMO MSC Resolution MSC.313(88).

In consideration of the alternative acceptance of national standards in accordance with IACS UR P4, para.4.4.2, the BMA allows the application of national standards (e.g. ASTM D635) to determine the flame spread characteristics on plastic piping on board Bahamian ships.

## **12.6 Lifting Equipment**

### *12.6.1 General Requirements for Lifting Equipment*

The Bahamas Merchant Shipping (Hatches and Lifting Plant) Regulations give effect to the requirements of ILO Convention 152 for ship's lifting gear.

Annual inspections of lifting gear shall be carried out by a "competent person". The meaning of "competent person" for the purposes of the MS (Hatches and Lifting Plant) Regulations is "a person over the age of 18 possessing the knowledge and experience required for the performance of thorough examinations and tests of ships' lifting plant" (Reg.2) and may include a suitably knowledgeable, trained and experienced senior member of the crew.

Training of the competent person may be carried out by qualified trainers from within or outside the Company. The Company is responsible for verifying the competence of the person or organisation carrying out inspections on lifting gear.

ILO Convention 152 is also applied by the BMA to offshore installations, including FPSO/FSU, in order to ensure that a satisfactory inspection and survey standard is applied. See separate entry in this document under MODU Code.

### *12.6.2 Personnel Elevators*

The MS (Hatches & Lifting Plant) Regulations and ILO 152 do not apply to personnel elevators. However, the BMA requires that elevators on Bahamian ships comply with ISO8383:1985. The ASME Elevator Code A.17.1, UK Maritime and Coastguard Agency (MCA) Code of Safe Working Practice Section 21.21 (which refers to the BS 5655 series) and EN81-1/EN81-2 may be accepted as an equivalent.

Required inspections are:

- routine inspection and test at intervals not exceeding six months;
- periodic inspections at one, three and five years;
- acceptance inspection at the commissioning of a new or altered elevator.

Inspections are to be carried out by a "competent person" and managers are responsible, under the ISM Code, for ensuring that the person carrying out the inspections is competent. A "competent person" for the purposes of this section is defined in BMA Information Bulletin No. 89. The Company is responsible for providing the competent person with the necessary information to be able to complete the inspection safely.

Emergency instructions and signs are to be posted in order to ensure safe operation and use.

## **13 International Code of Safety for High Speed Craft**

### *13.1.1 Survey & Certification*

Recognised Organisations are authorised to conduct surveys, review plans and issue certification in respect of the International Code of Safety for High Speed Craft, 1994 (the 1994 HSC Code) and the International Code of Safety for High-Speed Craft, 2000 (2000 HSC Code).

### *13.1.2 Permits to Operate*

High Speed Craft Permits to Operate are issued by the BMA. The Company shall apply direct to the BMA for a High Speed Craft Permit to Operate using Form R107. Relevant supporting information should be included with the application.

### *13.1.3 HSC Type Rating Training*

The BMA accepts training that has been carried out under the approval of a country recognised by The Bahamas (see BMA Information Bulletin No. 121). Alternatively, the company may apply for the shipboard training to be approved by the BMA in accordance with BMA Information Bulletin No. 86.

## **14 Code of Safety for Dynamically Supported Craft**

### *14.1.1 Survey & Certification*

Recognised Organisations are authorised to conduct surveys, review plans and issue certification in respect of the Code of Safety for Dynamically Supported Craft (DSC Code).

### *14.1.2 Permits to Operate*

Dynamically Supported Craft Permits to Operate are issued by the BMA. The Company shall apply direct to the BMA for a Dynamically Supported Craft Permit to Operate using Form R107. Relevant supporting information should be included with the application.

### *14.1.3 DSC Type Rating Training*

The BMA accepts training that has been carried out under the approval of a country recognised by The Bahamas (see BMA Information Bulletin No. 121). Alternatively, the company may apply for the shipboard training to be approved by the BMA in accordance with BMA Information Bulletin No. 86.

## **15 International Code for the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk (IBC Code)**

The BMA currently has no special instructions.

## **16 Carriage of Liquefied Gases in Bulk (GC Code and IGC Code)**

The BMA currently has no special instructions.

## **17 International Maritime Solid Bulk Cargoes Code (IMSBC Code)**

### **17.1 Self-unloading (SUL) bulk carriers**

Operational fire safety risk assessments shall be carried out by the Company for cargo handling areas on self-unloading bulk carriers featuring internally installed conveyor systems within the ship's structure. Due consideration shall be given to fire prevention and the effective operation of fire detection systems, containment and suppression under all anticipated operating conditions and cargoes.

## **18 International Code on Intact Stability, 2008 (IS Code)**

The BMA currently has no alternate or additional requirements, or specific interpretations to the recommendations in Part B of the 2008 IS Code.

## **19 International Code for the Safe Carriage of Grain (Grain Code)**

The BMA currently has no special instructions.

## **20 Code of Safety for Diving Systems**

### **20.1 General**

Recognised Organisations are authorised to conduct surveys for the issue and maintenance of certification of diving systems installed on Bahamian ships.

The standards to be complied with in respect of statutory certification are those as contained in the applicable annexes to IMO Assembly Resolutions A.831(19) "*Code of Safety for Diving Systems, 1995*" and A.692(17) "*Guidelines and Specifications for Hyperbaric Evacuation Systems*".

Further guidance is provided in BMA Information Bulletin No. 93.

### **20.2 Hyperbaric evacuation systems**

#### *20.2.1 Number*

The BMA recommends that dive support vessels and dive systems are fitted with at least two hyperbaric evacuation systems, where practicable.

Where a single hyperbaric evacuation system is fitted, the Company should:

- undertake a risk assessment for each diving project/work area and establish appropriate safeguards, taking into account relevant guidelines and matters such as availability of alternative means of rescue, proximity of other dive support ships or diving facilities, location/proximity of Life Support Package (LSP), any training requirements, etc.;
- ensure that ship specific contingency plans take into account the location of the single hyperbaric evacuation system when undertaking **any** operations whilst divers are in saturation, noting that incidents can occur during non-diving operations;

#### *20.2.2 Drills and Launching*

SOLAS III/19 requires lifeboats to be launched and manoeuvred in the water at least once every three months (with the exception of free-fall lifeboats, which have different requirements). Hyperbaric lifeboats and evacuation systems are not specifically referred to in SOLAS, however they are subject to the training and drills requirement specified in IMO Assembly Resolution A.692(17), which does not state any time periods.

The BMA recommends that the training and drills requirement specified in Para.4 of A.692(17) is followed, i.e. that drills "*...should not normally be carried out while the chambers are pressurized, but should be carried out at each available opportunity*".

In cases where the hyperbaric evacuation system cannot be launched due to the dive system being pressurised, an entry should be made in the Official Log Book explaining why the drill could not be undertaken (as per Paras. 7.2 and 7.3 of BMA Information Bulletin No.72) and the launch should take place at the first available opportunity.

The BMA also recommends that the crew assigned to launching of the hyperbaric evacuation system “walk through” the procedures for launch at regular intervals, so that they are familiar with the operation of the launching system.

## **21 Code of Safe Practice for the Carriage of Cargoes and Persons by Offshore Support Vessels (OSV Code)**

### **21.1 Carriage of Limited Amounts of Hazardous and Noxious Liquid Substances**

Recognising the requirement for certain offshore vessels to transport hazardous and noxious substances to offshore installations, the BMA applies IMO Assembly Resolution A.673(16) *“Guidelines for the Transport and Handling of Limited Amounts of Hazardous and Noxious Liquid Substances in Bulk on Offshore Vessels”*.

In accordance with A.673(16), “limited quantities” are considered to be quantities of bulk liquids not exceeding a maximum of 800m<sup>3</sup>, or a volume in m<sup>3</sup> equal to not more than 40% of the ship’s deadweight calculated at a cargo density of 1.0, whichever is less. The BMA may consider applications for quantities in excess of these amounts on a case by case basis.

Applications should be made by the Recognised Organisation in accordance with BMA Information Bulletin No.8.

### **21.2 Temporary Equipment & Chemicals used for Subsea Operations**

The BMA considers that the provisions of A.673(16), as amended, do not apply to temporary equipment and chemicals installed on board for use during subsea operations. Where temporary equipment and chemicals are installed, the Company shall undertake a risk assessment for the specific operation concerned. The risk assessment should address all identifiable hazards associated with the chemicals to be used. The relevant permits/licences should be obtained from the relevant coastal State where any chemicals are to be discharged to sea.

The **transport** of chemicals for discharge to offshore installations does fall within the provisions of A.673(16) and should be treated accordingly.

### **21.3 Carriage of Oil (MARPOL Annex I Cargoes)**

Regulation 1.5 of MARPOL Annex I defines an oil tanker as a *“ship constructed or adapted primarily to carry oil in bulk in its cargo spaces”*.

In general, where the quantity of oil to be carried is more than 50% of deadweight, the vessel will be considered as an oil tanker and will be required to comply with the relevant requirements for oil tankers.

Applications will be considered on a case by case basis and shall be made by the Recognised Organisation in accordance with BMA Information Bulletin No.8.

## **21.4 Application of MSC.335(90) stability requirements**

Ships with a keel laying date on or after 22 November 2012 should comply with the amendments to MSC.235(82) *Guidelines for the design and construction of offshore supply vessels, 2006* specified in MSC.335(90). Where ships constructed on or after 22 November 2012 do not comply with MSC.335(90), the BMA will consider the actual arrangements on a case-by-case basis. Applications shall be made by the Recognised Organisation in accordance with BMA Information Bulletin No.8.

## **22 Code of Safety for Special Purpose Ships (SPS Code)**

### **22.1 General Requirements**

The BMA has not adopted the Special Purpose Ship (SPS) Code. However, the BMA is aware that certain coastal States have adopted the Code and may require offshore ships/units operating in their waters to comply with the Code.

Upon Owner's request, Recognised Organisations may issue Special Purpose Ship Safety Certificates to ships that comply with the Code, on behalf of the BMA.

It should be noted that certification for ships constructed on or after 13 May 2008 should be to MSC.266(84) *Code of Safety for Special Purpose Ships, 2008* (2008 SPS Code). The BMA may approve the issue of certification under A.534(13) *Code of Safety for Special Purpose Ships* (1983 SPS Code) for ships constructed before 13 May 2008, however such certification may not be accepted by coastal States for ships delivered after this date.

Any requests for exemption from the provisions of the SPS Code, or issue of certification under the 1983 SPS Code, shall be forwarded via the Recognised Organisation as per BMA Information Bulletin No.8

### **22.2 Dual SPS Code and MODU Code Certification**

Notwithstanding Paragraph 1.2.2 of the 2008 SPS Code and the preamble to the 2009 MODU Code, the BMA may allow the application of both codes to special purpose vessels at the specific request of the owner. Where there are conflicting standards between the requirements of the Codes, the higher standard is to apply.

### **22.3 Use of freefall lifeboats**

The BMA allows the use of freefall lifeboats on SPS Code ships in lieu of davit launched lifeboats, subject to the following:

- In addition to the freefall lifeboats, inflatable or rigid liferafts of such aggregate capacity as will accommodate 50% of the total number of persons on board on each side of the vessel; and
- Liferafts are to be distributed evenly, in at least two groups on each side of the vessel, taking into account the layout of the vessel; and
- Liferafts are not to be stowed in way of the freefall lifeboats.

## **23 Code for the Construction and Equipment of Mobile Offshore Drilling Units (MODU Code)**

### **23.1 Drilling Units**

All drilling units shall be surveyed against the applicable parts of the 1979, 1989 or 2009 MODU Code, as applicable, unless otherwise agreed by the BMA (for example, where the coastal State requires compliance with SOLAS).

Recognised Organisations are authorised to issue MODU Code Safety Certificates as required by the 1979, 1989 or 2009 Code, as applicable.

In addition to the Bahamas national MODU Certificate and where required by the coastal state, the Recognised Organisation may issue a Statement of Compliance with the Special Purpose Ship Code.

During survey and certification of MODU or any other offshore unit, any reference to SOLAS shall incorporate the most recent SOLAS requirements.

### **23.2 Non-drilling Units**

#### *23.2.1 Application of the MODU Code to non-drilling units*

Drilling tenders and other offshore vessels such as pipe laying barges, accommodation units etc., are very similar in many respects to MODUs, therefore the applicable parts of the MODU Code may be applied to them. Consequently, upon satisfactory completion of design appraisals and initial surveys in accordance with the provisions of the MODU Code (either the 1979, 1989 or 2009 version, depending on the owner's and/or coastal state request), using an approach similar to that applied to MODUs not constructed fully under the requirements of the MODU Code, a Bahamas National Mobile Offshore Unit (MOU) Safety Certificate may be issued.

In addition to the Bahamas national MOU Certificate and where required by the coastal state, the RO may issue a Statement of Compliance with the Special Purpose Ship Code (see also 22.2).

### **23.3 Requirements applicable to all Mobile Offshore Units**

#### *23.3.1 Safe Manning*

The BMA has issued guidance on manning and qualification of seafarers. Please refer to BMA Information Bulletin Nos. 103, 104, 105, 106, 107, 108, 115, 118, 121, 124, 129, 130, 144, 146, 147 and 151.

#### *23.3.2 Safety of Navigation*

The 1979 and 1989 MODU Codes do not require compliance with SOLAS Chapter V requirements. Vessels subject to MODU Code survey which undertake self-propelled voyages shall be surveyed against SOLAS Chapter V requirements. On completion of satisfactory survey a Statement of Compliance with SOLAS Chapter V may be issued on

behalf of the Commonwealth of The Bahamas by the Recognised Organisation. Any non-compliant items are to be agreed with the BMA.

The 2009 MODU Code requires compliance with SOLAS Chapter V requirements. The BMA may exempt individual units from this requirement in accordance with Regulation 3 of SOLAS Chapter V. Applications for exemption shall be made by the Recognised Organisation as per BMA Information Bulletin No. 8.

### *23.3.3 Lifeboat testing*

The requirements of *IMO Resolutions MSC.81(70) & A.689(17)* apply to the testing of all new lifeboats, regardless of their means of launching (e.g. free-fall lifeboats are required to be tested).

The sister ship rule may be applied to the 5 knot launch test required by LSA Code Part 2, Para. 5.4, whereby the test is only necessary for the first vessel of a contracted series of ships with identical arrangements, and where the geometry of the lifeboat launching arrangement is also verified as being identical to the first vessel which has been satisfactorily tested.

### *23.3.4 Exemption from the carriage of lifeboat food rations and fishing tackle*

Offshore units operating outside the 200 mile limit and those undertaking positioning and delivery voyages which take them beyond the 200 mile limit must be referred to the BMA for consideration on a case by case basis.

### *23.3.5 GMDSS exemptions*

Applications for exemption from GMDSS requirements on the basis of nearby vessels or platforms will not be accepted, since the BMA has no control over these, or any other local communications network. However, for stationary platforms, FPSO units or vessels operating in a similar mode, limited departure from GMDSS requirements may be considered by the BMA, provided that the functional requirements of SOLAS Chapter IV are satisfied.

Applications for exemption are to be submitted by the Recognised Organisation in accordance with BMA Information Bulletin No. 8.

### *23.3.6 1989 MODU Code additional radio installation*

The additional radio station required under Chapter 11 of the 1989 MODU Code is not required for units which do not have a drilling capability.

Applications for exemption shall be submitted by the Recognised Organisation in accordance with the guidelines outlined in BMA Information Bulletin No. 8.

### *23.3.7 Crew Accommodation*

In general, MODU/MOUs are required to comply with Bahamas' Merchant Shipping (Crew Accommodation) Regulations.

With respect to Article 10.2 of ILO C92 (Placement of accommodation aft of the collision bulkhead), this requirement would not generally be applicable for a typical semi-submersible or jack-up vessel. However, for a self-propelled ship shaped vessel, it is expected that the requirement will be met. Any individual case for exemption might otherwise be made for exceptional structural design, low propulsion speed/tug in attendance or mode of operation etc.

### *23.3.8 MODU Code Crane Inspections*

There is an overlap between ILO 152, Bahamas Merchant Shipping Legislation and MODU Code. A notable difference between Chapter 12 of the 1979 and 1989/2009 MODU Codes is that of 4 yearly and 5 yearly testing requirements, respectively. In this regard, the testing requirement for all affected vessels (surveyed under the 1979 MODU Code) should be harmonised to 5 years, where necessary. This also conforms with the Bahamas Merchant Shipping (Hatches and Lifting Plant) Regulations.

For applicable vessels surveyed against the relevant MODU Code, the requirements of Chapter 12 must be verified.

The Merchant Shipping (Hatches and Lifting Plant) Regulations put the responsibility for maintenance, recording and implementation of an inspection and survey regime firmly on the employer and Master.

To satisfy MODU Code requirements, an 'initial' installation survey shall be conducted and initial operational tests and load testing is to be witnessed and verified by the Recognised Organisation.

The MODU Code does not specify that the annual inspection must be carried out by the Administration or Recognised Organisation. A "Competent Person", as defined in Regulation 2 of the Merchant Shipping (Hatches and Lifting Plant) Regulations, must carry out annual inspection of lifting gear. This can include a suitably experienced Classification Society surveyor or a suitably knowledgeable, trained and experienced senior member of the crew.

A Cargo Gear Register issued by a Classification Society may be deemed to satisfy the record keeping requirements of ILO 152 and/or the Merchant Shipping (Hatches and Lifting Plant) Regulations in whole or in part, according to the assessment of the Recognised Organisation.

In case of harmonisation or adjustment of the future survey requirements for lifting devices of vessels under the MODU Code, this may be carried out in a programme deemed to be appropriate by the Recognised Organisation.

### *23.3.9 Helideck lighting*

Helideck lighting may deviate from MODU Code requirements in order to conform to either International Civil Aviation Organisation standards or those of the coastal State in whose waters the vessel is operating.

Applications for such deviations shall be submitted by the Recognised Organisation in accordance with BMA Information Bulletin No. 8.

## **24 Other Specific Vessel Types**

### **24.1 Floating Production Storage and Offloading / Floating Storage Unit (FPSO/FSU)**

#### *24.1.1 General requirements*

All new buildings or any major conversion of an existing unit shall be surveyed against the applicable parts of the 2009 MODU Code, as amended, unless otherwise agreed by the BMA (for example, where the coastal State requires compliance with SOLAS).

It must be noted that only those areas modified during the conversion need to comply with the 2009 MODU Code or amended MODU Code in force at the time of conversion.

A new building is any FPSO / FSU with keel laid on or after 1 January 2012. A major conversion means a conversion of an existing ship or FPSO / FSU that:

- a. Substantially alters the dimensions or carrying capacity of the ship, FPSO / FSU; or
- b. Changes the type of the ship (e.g. to FPSO / FSU); or
- c. The intent of which, in the opinion of the Administration, is substantially to prolong its life; or
- d. Otherwise so alters the ship, FPSO / FSU that, if it were a new FPSO / FSU, it would become subject to relevant provisions of the latest Regulations/ Codes not applicable to it as an existing FPSO / FSU.

Any new building with a keel laying date earlier than 1 January 2012 or any major conversion commenced prior to 1 January 2012 is to comply with the 1989 MODU Code, as amended.

As a general principle "any revisions to SOLAS are to be applied to MODU-certificated Units where the hazard is perceived as being common" i.e., hazards on oil tankers, also present on FPSO / FSU. In case of doubt such matters will be individually considered by the BMA.

Please also refer to paragraph 5.1.3 & MSC-MEPC.2/Circ.9.

#### *24.1.2 Exemptions*

Typical exemptions that may be applied to FPSO / FSU in respect of SOLAS requirements are as follows:

- i. Exemption from SOLAS Chapter II-1 requirements for access to and within spaces in the cargo area of oil tankers and bulk carriers, on the proviso that subsequent close up inspections, as considered appropriate, are conducted using one of the acceptable 'alternative means of access' detailed within IACS SC 190.
- ii. Exemption from SOLAS Chapter II-1 requirements for safe access to tanker bows. Tankers converted into FPSO and FSU may be exempt from this requirement due to their size, freeboard and stationary position on site, provided that the unit:

- Is permanently moored and equipped with a position mooring system (i.e., spread, internal, or external turret). Note that permanent mooring systems include those which are able to be disconnected, for reasons of safety or for operational deployment.
  - Has the design and production of its topside process facilities on the main deck and turrets provided with non-slip walkways and lifelines for bow access equivalent to those required by SOLAS
- iii. Individual voyage exemptions in ballast to repair yard or similar will be favourably considered. Applications supported by the Recognised Organisation shall be made direct to the BMA London office.
- iv. Exemption from SOLAS Chapter II-1 requirements for Emergency Towing Arrangement. On the proviso that the FPSO complies with the towing requirements set out in paragraph 14.4 of the IMO MODU Code, there is no need to seek a waiver from the emergency towing arrangement requirements of SOLAS Chapter II-1.

Applications for exemptions shall be submitted by the Recognised Organisation in accordance with BMA Information Bulletin No. 8.

## **24.2 Vessels fitted with Dynamic Positioning (DP) Systems**

### *24.2.1 Flag State Verification and Acceptance Document for Dynamic Positioning Systems*

The BMA does not require the issue of a Flag State Verification and Acceptance Document (FSVAD) for vessels fitted with dynamic positioning systems as described in IMO MSC Circular MSC/Circ.645.

However, Owners may voluntarily request the Recognised Organisation to issue a FSVAD, on behalf of the BMA, to satisfy coastal State requirements.

Such requests should be made via the Recognised Organisation in accordance with BMA Information Bulletin No. 8.

## **24.3 Vessels fitted with Helicopter Landing Facilities**

With the exception of MODUs, helicopter deck marking and lighting should generally conform to the International Civil Aviation Authority (ICAO) standards.

Deviations to the ICAO standard will be considered by the BMA on a case by case basis. Applications for such deviations shall be submitted by the Recognised Organisation in accordance with the guidelines outlined in BMA Information Bulletin No. 8.

## **24.4 Yachts**

### *24.4.1 The Bahamas Yacht Code*

Charter yachts, i.e. yachts in commercial use, shall comply with the Bahamas Yacht Code (BYC). This includes private yachts engaged on occasional charters, which shall comply to the extent possible.

Private yachts, i.e. yachts in non-commercial use, are strongly encouraged to voluntarily comply with the BYC, to the extent possible.

Please refer to The Bahamas Yacht Code and BMA Information Bulletin Nos. 102 and 133.

#### **24.5 Ships operated exclusively within Bahamian Territorial waters or within Bahamian near-coastal waters**

For ships operating, or intended to operate, exclusively in the Bahamian near coastal waters and/or within Bahamian territorial waters, the applicable standards are the Code of Safety for Cargo Ships operating in the Caribbean (CCSS Code) or Code of Safety for Small Commercial Vessels operating in the Caribbean (SCV Code).

Recognised Organisations are authorised to conduct surveys and issue applicable statutory certificates as appropriate.

Please refer to BMA Information Bulletin No. 99.

#### **24.6 Vessels under 500 gross tonnage ("Non-Convention" Vessels)**

IACS Recommendation No. 99 Rev.1 April 2013 "*Recommendations for the Safety of Cargo Vessels of less than Convention Size*" may be applied, except where compliance with the CCSS Code or the SCV Code is applicable.

#### **24.7 Passenger ships**

##### *24.7.1 Recommended measures to enhance safety*

The BMA recommends that Companies operating passenger ships voluntarily apply the measures in MSC.1/Circ.1446/Rev.2 *Recommended Interim Measures for Passenger Ship Companies to Enhance the Safety of Passenger Ships*.

##### *24.7.2 Sale of "over the counter" medicines to passengers*

The Bahamas Pharmacy Council has advised the BMA that the sale of "over the counter" type medicines<sup>3</sup> to passengers on board Bahamian ships is permitted, subject to the following conditions:

- (i) Medicines must be listed in the United Kingdom Medicines and Healthcare products Regulatory Agency (MHRA) "*Consolidated list of substances which are present in authorised medicines for general sale*" (List B), which may be downloaded from the MHRA website:

---

<sup>3</sup> "Over the counter" medicines are those which can be sold without a doctor's prescription and which may be purchased in many countries in supermarkets, convenience stores, etc.

<http://www.mhra.gov.uk/Howweregulate/Medicines/Licensingofmedicines/Legalstatusandreclassification/Listsofsubstances/index.htm>

- (ii) Pain relief medication should have a maximum pack size of 16 tablets or capsules and have a maximum strength of 200mg for ibuprofen, 325mg for aspirin (acetylsalicylic acid) and 500mg for paracetamol (acetaminophen).
- (iii) Sales of pain relief medication should be limited to two (2) packs in any one transaction;
- (iv) **The sale of products containing any amount of Codeine is not permitted.**

The above restrictions do not apply to any medicines provided by the Master, ship's doctor (where carried) or medical officer.

#### *24.7.3 Carriage of medical oxygen in passenger cabins*

The BMA recommends that where passengers bring their own medical oxygen cylinders on board, only one cylinder at a time is kept in the passenger's cabin. Any further cylinders are to be stored in a designated safe area, in compliance with SOLAS VII and the IMDG Code.

The BMA also recommends that the location of any cabins containing medical oxygen cylinders is made known to the bridge/emergency teams. Appropriate procedures should be incorporated into the Company's Safety Management System.

#### *24.7.4 Carriage of fireworks*

The BMA has no objection to the carriage of fireworks on board passenger ships for use in firework displays, provided that the fireworks are carried in accordance with the IMDG Code and the net explosive weight of the fireworks is kept to the minimum necessary.

Firework casings should be made of biodegradable materials. Fireworks for use in MARPOL V special areas should have casings made from plant based materials which can readily decompose on contact with the sea.

#### *24.7.5 Marriage On board*

The Bahamas permits marriages to take place on Bahamian ships, subject to certain restrictions. Full details of the process and procedures relating to this service can be obtained from the Registrar General whose details are as follows:

The Registrar General  
Registrar Generals Department,  
Office of the Attorney General & Ministry of Legal Affairs,  
Shirley House,  
#50 Shirley Street,  
P. O. Box N-532,  
Nassau, N.P.,  
The Bahamas.

Phone: (242) - 397-9143/58 or 397-8959 or 397-9107 or 397-8953 397-9178

Fax: (242) - 322-5553

#### 24.7.6 Tenders

Tenders which are not certified as lifeboats shall be assessed by the Recognised Organisation under MSC.1/Circ.1417/Corr.1 *Guidelines for Passenger Ship Tenders* and Chapter IV of the LSA Code, unless otherwise agreed by the BMA.

Persons operating tenders should have received relevant training which covers, as a minimum, the standards specified in MSC.1/Circ.1417/Corr.1.

### 24.8 Research/survey vessels

#### 24.8.1 Entry clearance for certain coastal States

Notwithstanding Article 17 of the UN Convention on the Law of the Sea (UNCLOS) related to innocent passage, some coastal States require all survey vessels to have prior clearance before entering their territorial waters. It is the Company's responsibility to establish what clearance, if any, is required.

The BMA will assist in facilitating the process of obtaining clearance if requested by owners. **It should be noted that the diplomatic process of obtaining clearance can take several weeks and early application is strongly recommended to reduce the possibility of delays to the ship.**

As per Article 19(j) of UNCLOS, the carrying out of research or survey activities is considered prejudicial to the peace, good order or security of a coastal State and is not considered innocent passage. The Company is responsible for obtaining the necessary clearances and/or permits from the affected coastal State(s) prior to undertaking survey work.

## 25 Approvals

### 25.1 General

The BMA may approve equipment manufactured in The Bahamas. In such cases approval will normally be carried out in conjunction with a Bahamas Recognised Organisation.

The BMA has issued advice on the approval acceptability of equipment for use on board Bahamian ships.

Please refer to BMA Information Bulletin No.71.

### 25.2 Approval of service stations for inflatable LSA

The agreed position by IACS members as contained in UR Z17 is endorsed by the BMA, with additional provisions below:

Recognised Organisations may:

- i. approve the servicing station in accordance with IACS UR Z17 which include requirements for the servicing station's quality assurance system in addition to the requirements in IMO Assembly Resolution A.761(18) as amended, and list the approved companies in a public list; or
- ii. accept the servicing station approved and listed by the flag Administration itself or another Recognised Organisation acting on behalf of the flag Administration; or
- iii. accept the servicing stations approved and listed by another SOLAS Contracting government (normally, the government of the country where the servicing station is located), provided that the Recognised Organisation:
  - reviews the approval certification to confirm that it addresses all of the international requirements; and
  - confirms that the service station has a valid authorisation from the manufacturer; and
  - recognises that the BMA reserves the right to determine at any stage whether the applicable servicing station requires to undergo the full approval process by a Bahamas Recognised Organisation.

### **25.3 Approval of Training Providers**

The BMA has granted flag State approval ("the approval") to some Companies and training providers to undertake training and issue appropriate certificates under the SOLAS and STCW Conventions and the HSC Codes.

Details of the Companies, Training Providers and the approvals granted are available on the BMA website ([www.bahamasmaritime.com](http://www.bahamasmaritime.com)).

Please also refer to BMA Information Bulletin No. 86.

## Revision Record
